Biosynthetic Products for Cancer Chemotherapy George Pettit, 2012-12-06 Cancer exacts an incredibly destructive toll on the world's human populations In recent years we have frequently heard the expression war on cancer but compared to the carnage inflicted by cancer our scientific and medical efforts to date would seem more like a minor skirmish Some comprehension of the cancer problem can be obtained from a look at the current and projected casualty list for the United States In this country about 700 000 new cases of cancer will be diagnosed in 1976 and over 1 million known cases will continue to be treated Over 400 000 of these patients will die from cancer in our bicentennial year With the incidence of cancer in the United States increasing to 5.2% in 1975 compared to the 1.1% yearly rate

experienced for decades Dr F J Rauscher Jr 338 Director of the National Cancer Institute has estimated that more than 10 million people will be under treatment for cancer and nearly 4 million will expire from cancer in this decade At that rate cancer will appear in nearly two of three families and the necessary medical care will cost some 15 20 billion per year Thus unless methods for the treatment and control of cancer are markedly improved about 53 million Americans now alive will eventually be cancer patients Unfortunately the major types of human cancer are still beyond curative care by surgical and radiological techniques and because of the paucity of currently available cancer chemotherapeutic drugs with curative potential

Single Agents in Cancer Chemotherapy R. B. Livingston, Stephen K. Carter, 1970-11 The clinical trials program of anti tumor drugs was started by the National Cancer Institute in 1955 In the past 15 years this national network has collected a large body of data on all of the recognized anti tumor drugs as well as upon new experimentally promising agents While the most important of these studies have been published there has remained a wealth of data not generally available to the scientific community Drs Carter and Livingston have not only succeeded in organizing this large corpus they have in addition analyzed and interpreted the clinical data in a way that will be highly useful for years to come From a perusal of this volume it becomes apparent that some drugs are more active against certain tumors than had been realized that the evidence for the activity of certain drugs against specific tumors is sometimes tenuous surprisingly that some highly active agents have never been tried against some of the fairly common tumors Their monumental work has provided not only access to the hard data it has also shown the need for research to fill in important gaps in our knowledge The authors and the IFI Plenum Press are to be congratulated for this useful and important work C Gordon Zubrod M D Scientific Director for Chemotherapy National Cancer Institute National Institutes of Health Bethesda Maryland v Acknowledgment The authors wish to thank Dr C Gordon Zubrod and Dr *Cancer Chemotherapy: Concepts, Clinical Investigations and Therapeutic Advances* Franco M.

Muggia, 2012-12-06 Experimental chemotherapy continues to be at the forefront of cancer therapeutics Topics covered in the preceding volume on cancer chemotherapy in this series such as study of drugs by alkaline elution the development of the antimetabolite tiazofurin and the treatment of germ cell tumors have become informative references to current experimentalists and practitioners In even earlier volumes reviews of the platinum compounds anthracyclines and osteosarcoma represent topics associated with such rapid progress requiring a look back to provide the appropriate perspective Similarly we venture to predict that the topics in this volume will become useful landmarks for future drug development and disease strategies In the area of drug development what is being learned about old established antineoplastics is raising renewed expectations that it will be translated into improved applications and patient benefit For example we now have the ability to modulate the action of alkylating agents and fluorinated pyrimidines to achieve greater sensitivity A new compound for an old target trimetrexate an antifolate that does not polyglutamate will have a role not only in treatment of neoplastic diseases but also protozoal infection Fundamentals of Cancer Chemotherapy Kurt Hellmann, 1987 *Novel Chemotherapeutic Agents: Preactivation in the Treatment of Cancer and AIDS* Kirpal S. Gulliyar, 2013-11-21 This book is about a discovery termed preactivation that is considered a major breakthrough in photodynamic therapy and in drug development The process of preactivation generates previously unknown

chemotherapeutic agents that are not only effective against malignancies and viral infections but are also easily tolerated
