Cross-Modal Learning: Adaptivity, Prediction and Interaction Jianwei Zhang, Stefan Wermter, Fuchun Sun, Changshui Zhang, Andreas K. Engel, Brigitte Röder, Xiaolan Fu, Gui Xue, 2023-02-02 The purpose of this Research Topic is to reflect and discuss links between neuroscience psychology computer science and robotics with regards to the topic of cross modal learning which has in recent years emerged as a new area of interdisciplinary research The term cross modal learning refers to the synergistic synthesis of information from multiple sensory modalities such that the learning that occurs within any individual sensory modality can be enhanced with information from one or more other modalities Cross modal learning is a crucial component of adaptive behavior in a continuously changing world and examples are ubiquitous such as learning to grasp and manipulate objects learning to walk learning to read and write learning to understand language and its referents etc In all these examples visual auditory somatosensory or other modalities have to be integrated and learning must be cross modal In fact the broad range of acquired human skills are cross modal and many of the most advanced human capabilities such as those involved in social cognition require learning from the richest combinations of cross modal information In contrast even the very best systems in Artificial Intelligence AI and robotics have taken only tiny steps in this direction Building a system that composes a global perspective from multiple distinct sources types of data and sensory modalities is a grand challenge of AI yet it is specific

enough that it can be studied quite rigorously and in such detail that the prospect for deep insights into these mechanisms is quite plausible in the near term Cross modal learning is a broad interdisciplinary topic that has not yet coalesced into a single unified field Instead there are many separate fields each tackling the concerns of cross modal learning from its own perspective with currently little overlap We anticipate an accelerating trend towards integration of these areas and we intend to contribute to that integration By focusing on cross modal learning the proposed Research Topic can bring together recent progress in artificial intelligence robotics psychology and neuroscience [Popular Science](#) ,1988 [Popular Science](#) ,1981-08 Popular Science gives our readers the information and tools to improve their technology and their world The core belief that Popular Science and our readers share The future is going to be better and science and technology are the driving forces that will help make it better [Generative Video with AI_ Step-by-Step Tips for Creators](#) Expert, Generative Video with AI_ Step by Step Tips for Creators Unleash professional grade storytelling cinematic visuals and scalable content production with Generative Video with AI Step by Step Tips for Creators the definitive 2025 guide for filmmakers YouTubers marketers educators and digital artists who want to harness the power of AI driven video generation script automation visual synthesis and smart editing workflows Designed for both beginners and advanced creators this guide combines SEO rich keywords bolded techniques and action focused systems to help you create stunning videos faster cheaper and with unlimited creative freedom The AI Video Foundations Section introduces the core mechanics behind modern generative video technology You ll learn how tools like Runway Gen 2 Pika Labs Stability Video Sora style models and Kaiber produce motion sequences using latent diffusion keyframe interpolation multi frame prediction and prompt guided storyflow This section also explains essential concepts like fps control motion coherence consistency locking aspect ratio management and style persistence preparing you to generate high quality results from day one In the Scriptwriting Narrative Automation Section you ll discover how to use ChatGPT Claude Notion AI and Gemini to create polished scripts storyboards character arcs scene descriptions and cinematic shot lists Learn frameworks for generating video hooks voiceover scripts dialogue generators and brand messaging templates that are perfectly aligned with your niche from YouTube tutorials and marketing ads to documentaries music videos and short films The Prompt Engineering for Video Section teaches you how to write cinematic prompts that produce sharp emotionally compelling sequences You ll learn prompt formulas for Character creation personality traits Camera movement cues dolly zoom tracking shot slow pan FPV Lighting atmosphere control Art styles realistic anime cyberpunk surreal minimalist photorealistic Color grading mood signatures Scene transitions multi shot storytelling This section includes before and after prompt examples style presets consistency hacks and negative prompts to eliminate distortions and flickering The Video Generation Workflows Section gives you step by step systems for producing complete videos Learn how to build a full pipeline from concept script scenes generation editing export using tools like Runway Gen 2 for scene generation Pika 1 0 for motion refinement Midjourney DALL E for concept art keyframe design
