Dictionary Learning in Visual Computing Qiang Zhang, Baoxin Li, 2015-05-01 The last few years have witnessed fast development on dictionary learning approaches for a set of visual computing tasks largely due to their utilization in developing new techniques based on sparse representation Compared with conventional techniques employing manually defined dictionaries such as Fourier Transform and Wavelet Transform dictionary learning aims at obtaining a dictionary adaptively from the data so as to support optimal sparse representation of the data In contrast to conventional clustering algorithms like K means where a data point is associated with only one cluster center in a dictionary based representation a data point can be associated with a small set of dictionary atoms Thus dictionary learning provides a more flexible representation of data and may have the potential to capture more relevant features from the original feature space of the data One of the early algorithms for dictionary learning is K SVD In recent years many variations extensions of K SVD and other new algorithms have been proposed with some aiming at adding discriminative capability to the dictionary and some attempting to model the relationship of multiple dictionaries One prominent application of dictionary learning is in the general field of visual computing where long standing challenges have seen promising new solutions based on sparse representation with learned dictionaries With a timely review of recent advances of dictionary learning in visual computing covering the most recent literature with an emphasis on papers after 2008 this book provides a systematic presentation of the general methodologies specific algorithms and examples of applications for those who wish to have a quick start on this subject

Handbook of Convex Optimization Methods in Imaging Science Vishal Monga, 2017-10-27 This book covers recent advances in image processing and imaging sciences from an optimization viewpoint especially convex optimization with the goal of designing tractable algorithms Throughout the handbook the authors introduce topics on the most key aspects of image acquisition and processing that are based on the formulation and solution of novel optimization problems The first part includes a review of the mathematical methods and foundations required and covers topics in image quality optimization and assessment The second part of the book discusses concepts in image formation and capture from color imaging to radar and multispectral imaging The third part focuses on sparsity constrained optimization in image processing and vision and includes inverse problems such as image restoration and de noising image classification and recognition and learning based problems pertinent to image understanding Throughout convex optimization techniques are shown to be a critically important mathematical tool for imaging science problems and applied extensively Convex Optimization Methods in Imaging Science is the first book of its kind and will appeal to undergraduate and graduate students industrial researchers and

engineers and those generally interested in computational aspects of modern real world imaging and image processing problems

Machine Learning: Theory and Applications, 2013-05-16 Statistical learning and analysis techniques have become extremely important today given the tremendous growth in the size of heterogeneous data collections and the ability to process it even from physically distant locations Recent advances made in the field of machine learning provide a strong framework for robust learning from the diverse corpora and continue to impact a variety of research problems across multiple scientific disciplines The aim of this handbook is to familiarize beginners as well as experts with some of the recent techniques in this field The Handbook is divided in two sections Theory and Applications covering machine learning data analytics biometrics document recognition and security Very relevant to current research challenges faced in various fields Self contained reference to machine learning Emphasis on applications oriented techniques Document Image Processing Ergina Kavallieratou, Laurence Likforman-Sulem, 2018-10-03 This book is a printed edition of the Special Issue Document Image Processing that was published in J Imaging

Learning Approaches in Signal Processing Wan-Chi Siu, Lap-Pui Chau, Liang Wang, Tieniu Tang, 2018-12-07 Coupled with machine learning the use of signal processing techniques for big data analysis Internet of things smart cities security and bio informatics applications has witnessed explosive growth This has been made possible via fast algorithms on data speech image and video processing with advanced GPU technology This book presents an up to date tutorial and overview on learning technologies such as random forests sparsity and low rank matrix estimation and cutting edge visual signal processing techniques including face recognition Kalman filtering and multirate DSP It discusses the applications that make use of deep learning convolutional neural networks random forests etc The applications include super resolution imaging fringe projection profilometry human activities detection capture gesture recognition spoken language processing cooperative networks bioinformatics DNA and healthcare A Practical Introduction to Computer Vision with OpenCV Kenneth Dawson-Howe, 2014-03-20 Explains the theory behind basic computer vision and provides a bridge from the theory to practical implementation using the industry standard OpenCV libraries Computer Vision is a rapidly expanding area and it is becoming progressively easier for developers to make use of this field due to the ready availability of high quality libraries such as OpenCV 2 This text is intended to facilitate the practical use of computer vision with the goal being to bridge the gap between the theory and the practical implementation of computer vision The book will explain how to use the relevant OpenCV library routines and will be accompanied by a full working program including the code snippets from the text This textbook is a heavily illustrated practical introduction to an exciting field the applications of which are becoming almost ubiquitous We are now surrounded by cameras for example cameras on computers cameras imaging difficult modalities such as ultrasound X ray MRI in hospitals and surveillance cameras This book is concerned with helping the next generation of computer developers to make use of all these images in order to develop systems which are more intuitive and interact with us in more intelligent ways Explains the theory behind basic

computer vision and provides a bridge from the theory to practical implementation using the industry standard OpenCV libraries Offers an introduction to computer vision with enough theory to make clear how the various algorithms work but with an emphasis on practical programming issues Provides enough material for a one semester course in computer vision at senior undergraduate and Masters levels Includes the basics of cameras and images and image processing to remove noise before moving on to topics such as image histogramming binary imaging video processing to detect and model moving objects geometric operations edge detection features detection recognition in images Contains a large number of vision application problems to provide students with the opportunity to solve real problems Images or videos for these problems are provided in the resources associated with this book which include an enhanced eBook **American Reference Books Annual** Bohdan S.
