Dictionary Of Colour A Lexicon Of The Language Of Colour:

A Dictionary of Colour Ian Paterson, 2004 With more than 4 000 entries this dictionary is the first of its kind a treasury of color words and phrases a comprehensive resource for exploring every aspect of color **The Language of Colour in the Bible** Lourdes García Ureña, Emanuela Valeriani, Anna Angelini, Carlos Santos Carretero, Marina Salvador Gimeno, 2022-04-19 The Bible is one of the books that has aroused the most interest throughout history to the present day However there is one topic that has mostly been neglected and which today constitutes one of the most emblematic elements of the visual culture in which we live immersed the language of colour Colour is present in the biblical text from its beginning to its end but it has hardly been studied and we appear to have forgotten that the detailed study of the colour terms in the Bible is essential to understanding the use and symbolism that the language of colour has acquired in the literature that has forged European culture and art The objective of the present study is to provide the modern reader with the meaning of colour terms of the lexical families related to the green tonality in order to determine whether they denote only color and if so what is the coloration expressed or whether together with the chromatic denotation another reality inseparable from colour underlies along with the chromatic denotation there is another underlying reality that is inseparable from colour We will study the symbolism that which underpins some of these colour terms and which European culture has inherited This lexicographical study requires a methodology that allows us to approach colour not in accordance with our modern and abstract concept of colour but with the concept of the ancient civilizations This is why the concept of colour that emerges from each of the versions of the Bible is studied and compared with that found in theoretical reflection in both Greek and Latin Colour thus emerges as a concrete reality visible on the surface of objects reflecting in many cases not an intrinsic quality but their state This concept has a reflection in the biblical languages since the terms of colour always describe an entity in this sense one can say that they are embodied and include within them a wide chromatic spectrum that is they are mostly polysemic Structuralism through the componential analysis although providing interesting contributions had at the same time serious shortcomings when it came to the study of colour These were addressed through the theoretical framework provided by cognitive linguistics and some of its tools such as cognitive domains metonymy and metaphor Our study then is one of the first to apply some of the contributions of cognitive linguistics to lexicography in general and particularly with reference to the Hebrew Greek and Latin versions of the Bible A further novel contribution of this research is that the meaning is expressed through a definition and not through a list of possible colour terms as happens in dictionaries or in studies referring to colour in antiquity The definition allows us to delve deeper and discover new nuances that enrich the understanding of colour in the three great civilizations involved in our study Israel Greece and Rome *Lexicalization patterns in color naming* Ida Raffaelli, Daniela Katunar, Barbara Kerovec, 2019-10-09 The volume presents sixteen chapters focused on lexicalization patterns used in color naming in a variety of languages Although previous studies have dealt with

categorization and perceptual salience of color terms few studies have been consistently conducted in order to investigate phonological morphological syntactic and semantic devices languages use to form color terms The aim of this volume is to approach color data from a relativist and typological perspective and to address some novel viewpoints in the research of color terms such as a the focus on language structure per se in the study of lexicalization data b investigation of inter and intra language structural variation c culture and language contact as reflected in language structure Topics of this book have a broad appeal to researchers working in the fields of linguistics anthropology sociology and psychology

Colour Studies
Wendy Anderson, Carole P. Biggam, Carole Hough, Christian Kay, 2014-11-15 This volume presents some of the latest research in colour studies by specialists across a wide range of academic disciplines Many are represented here including anthropology archaeology the fine arts linguistics onomastics philosophy psychology and vision science The chapters have been developed from papers and posters presented at the Progress in Colour Studies PICS12 conference held at the University of Glasgow Papers from the earlier PICS04 and PICS08 conferences were published by John Benjamins as Progress in Colour Studies 2 volumes 2006 and New Directions in Colour Studies 2011 respectively The opening chapter of this new volume stems from the conference keynote talk on prehistoric colour semantics by Carole P Biggam The remaining chapters are grouped into three sections colour and linguistics colour categorization naming and preference and colour and the world Each section is preceded by a short preface drawing together the themes of the chapters within it There are thirty one colour illustrations

The Semantics of Colour C. P. Biggam, 2012-03-29 Human societies name and classify colours in various ways Knowing this is it possible to retrieve colour systems from the past This book presents the basic principles of modern colour semantics including the recognition of basic vocabulary subsets specialised terms and the significance of non colour features Each point is illustrated by case studies drawn from modern and historical languages from around the world These include discussions of Icelandic horses Peruvian guinea pigs medieval roses the colour yellow in Stuart England and Polynesian children s colour terms Major techniques used in colour research are presented and discussed such as the evolutionary sequence Natural Semantic Metalanguage and Vantage Theory The book also addresses whether we can understand the colour systems of the past including prehistory by combining various semantic techniques currently used in both modern and historical colour research with archaeological and environmental information

Anthropology of Color
Robert E. MacLaury, Galina V. Paramei, Don Dedrick, 2007-11-21 The field of color categorization has always been intrinsically multi and inter disciplinary since its beginnings in the nineteenth century The main contribution of this book is to foster a new level of integration among different approaches to the anthropological study of color The editors have put great effort into bringing together research from anthropology linguistics psychology semiotics and a variety of other fields by promoting the exploration of the different but interacting and complementary ways in which these various perspectives model the domain of color experience By so doing they significantly promote the emergence of a coherent field of the anthropology of
