Dictionary Of Neurological Signs:

A Dictionary of Neurological Signs A.J. Larner, 2016-04-28 This updated and expanded Fourth Edition is an alphabetical listing of commonly presenting neurological signs designed to guide the physician toward the correct clinical diagnosis The dictionary is focused problem based and concise The structured entries in this practical clinical resource provide summaries of a wide range of neurological signs Each entry includes a definition of the sign a brief account of the clinical technique required to elicit the sign a description of the other signs which may accompany the index sign an explanation of pathophysiological and or pharmacological background differential diagnosis brief treatment details and where known the neuroanatomical basis of the sign *A Dictionary of Neurological Signs* Fourth Edition is an indispensable reference for all students trainees and clinicians who care for patients with neurological disorders and could also be used in preparation for exams since each entry is a snapshot of a specific disorder or disease

A Dictionary of Neurological Signs A.J. Larner, 2007-05-08 Neurology has always been a discipline in which careful physical examination is paramount The rich vocabulary of neurology replete with eponyms attests to this historically The decline in the importance of the examination has long been predicted with the advent of more detailed neuroimaging However neuroimaging has often provided a surfeit of information from which salient features have to be identified dependent upon the neurological examination A dictionary of neurological signs has a secure future A dictionary should be informative but unless it is unwieldy it cannot be comprehensive nor is that claimed here Andrew Larner has decided sensibly to include key features of the history as well as the examination There is no doubt that some features of the history can strike one with the force of a physical sign There are entries for palinopsia and environmental tilt both of which can only be elicited from the history and yet which have considerable significance There is also an entry for the head turning sign observed during the history taking itself as well as the majority of entries relating to details of the physical examination This book is directed to students and will be valuable to medical students trainee neurologists and professions allied to medicine Neurologists often speak in shorthand and so entries such as absence and freezing are sensible and helpful
