

Aeolis Quadrangle A region of Mars formed in the Late *Noachian or Early *Hesperian Epoch, containing both extensional and compressional land-forms and *valles, some of which may be outflow channels, but some of which may be tectonic rift features.

aerial photograph A photograph taken from an aircraft. In hydrology, false-colour infrared photographs are used to determine the wetness and temperature of soils and to detect *springs.

aerial photography The taking of aerial photographs of rock exposures and of the ground surface for purposes of geologic interpretation. The photographs may be taken vertically, or at a high-oblique or low-oblique angle, and may be assembled like a mosaic to provide a picture of a large area. Stereoscopic cameras (two cameras within a single body) may be used to produce pairs of pictures that provide three-dimensional pictures when observed through a stereoscopic viewer. See PHOTOGEOLOGY.

aerobic **1.** Of an environment: one in which air (oxygen) is present. In the case of a depositional environment, one with more than 1 ml of dissolved oxygen per litre of water. Compare ANAEROBIC; and DYSAEROBIC. **2.** Of an organism: one requiring the presence of oxygen for growth, i.e. an aerobe. **3.** Of a process: one that occurs only in the presence of oxygen.

aerodynamic roughness Uneven flow of air caused by irregularities in the surface (which may be of a solid, or of air of different density) over which the flow takes place.

aerological diagram Diagram to demonstrate variations with height of the physical characteristics of the atmosphere, particularly its temperature, pressure, and *humidity.

aeromagnetic survey Survey of the Earth's magnetic field, based on data from *magnetometers towed behind aircraft or suspended below helicopters. These instruments measure the total intensity of the *geomagnetic field or, occasionally, components of this field. The resulting measurements can then be compared with theoretical models for the value of the field and the differences (*magnetic anomalies) can be interpreted in terms of changes in the magnetic properties of the rocks below the survey line or grid. The magnetometers are usually flown with other instrumentation, e.g. *radiometric and electromagnetic, at the lowest practicable con-

stant height above the ground. Usually the magnetometer is housed in a 'bird' towed behind the aircraft, or in a wing-tip pod, or in a 'stinger' in the tail. In cases where the magnetometer is on board, in-board coil systems compensate for the aircraft's own magnetic field.

Aeronian A *stage (436–439 Ma ago) of the Lower *Silurian (*Llandovery Period) underlain by the *Rhuddanian and overlain by the *Telychian.

aerosol Colloidal substance, either natural or man-made, that is suspended in the air because the small size (0.01–10 µm) of its particles makes them fall slowly. Aerosols in the *troposphere are usually removed by *precipitation and their *residence time is measured in days or weeks. Aerosols that are carried into the *stratosphere usually remain there much longer. Tropospheric aerosols may act as *Aitken nuclei but the general effect of aerosols is to absorb, reflect, or scatter radiation. Stratospheric aerosols, mainly sulphate particles resulting from volcanic *eruptions, may reduce *insolation significantly. About 30% of tropospheric dust particles are the result of human activities. See ATMOSPHERIC STRUCTURE; MIE SCATTERING; RAYLEIGH SCATTERING; and VOLCANIC DUST.

Aëtosauria Mainly *Triassic group of primitive thecodontian ('tooth-in-socket') reptiles (see THECODONTIA). They resembled heavily armoured crocodiles, and appear to have been specialized herbivores or possibly omnivores. They grew up to 3 m long, and their armour plating comprised rows of bony *plates.

AFC See ASSIMILATION-FRACTIONAL CRYSTALLIZATION.

AF demagnetization See ALTERNATING MAGNETIC FIELD DEMAGNETIZATION.

AFM diagram A three-component, triangular graph used to show how metamorphic *mineral assemblages vary as a function of *rock composition within one *metamorphic facies. Besides SiO₂, the five most abundant oxides found in *metamorphic rocks are Al₂O₃, CaO, FeO, MgO, and K₂O. The three components plotted on AFM diagrams are derived from a tetragonal diagram, with species Al₂O₃, K₂O, FeO, and MgO, and are ideal for showing mineral assemblage variations as a function of the composition of *pelites. Mineral and rock compositions plotting within this diagram are projected on to the Al₂O₃–FeO–MgO face from either the *muscovite or K-feldspar point on
