Detection Of Nonplanar Surfaces In Visual Space:

The Detection of Nonplanar Surfaces in Visual Space W. R. Uttal, 2014-01-14 First published in 1984 This monograph is the third in a series that examines the nature of a midlevel visual process relatively uncontaminated by either peripheral receptor or central cognitive processing The paradigm utilized in this study selectively assays what seems to be a relatively fixed algorithmic mechanism involved in the extraction of dotted stimulus forms from masks consisting of random dots

The Detection of Nonplanar Surfaces in Visual Space, 1984 This monograph presents the results of a series of 17 experiments designed to provide a partial answer to two questions concerning the detection of dotted forms in dotted visual masks 1 What is the effect of the spatial geometry of three dimensional nonplanar forms on their detectability 2 What is the effect on the signal to noise ratio on their detectability The results of the study indicate that the spatial geometry exerts virtually no effect until a threshold level of geometrical complexity is exceeded by the stimulus forms Beyond that threshold the effects of form are significant but modest in absolute amplitude The results further indicate that a putative large effect of form obtained with sinusoidal stimuli actually results from a violation of the Shannon Weaver sampling theorem from information theory and is thus due to inadequate definition of the form rather than to the nature of the form On the other hand the signal to noise ratio strongly influences detectability regardless of whether it is manipulated by varying the number of dots in the stimulus form or by varying the number of masking dots This study failed to extend a highly successful autocorrelation type theory from two dimensions to three dimensions The implications and background of this study are discussed in detail Scientific and Technical Aerospace Reports, 1984

Visual Detection of Motion Andrew T. Smith, Robert J. Snowden, 1994 The brain's ability to detect movement within the retinal image is crucial not only for determining the trajectories of moving objects but also for identifying and interpreting image motion resulting from eye and head movements This book summarizes our knowledge of how information about image motion is encoded in the brain Key Features Valuable reference source for those involved in the rapidly expanding area of motion perception Strong emphasis on integration of physiological computation and psychophysical approaches Topics include Principles of local motion detection Inputs to local motion detectors Integration of motion signals Higher order interpretation of motion Motion detection and eye movements

The Uttal Tetralogy of Cognitive Neuroscience William R. Uttal, 2022-07-30 These four volumes originally published between 1973 and 1988 were intended to provide a broad survey of cognitive neuroscience a field known variously as physiological psychology or psychobiology in the 1970s and 1980s when the books were written The general goal was to summarize what was known about the relation between brain and mind at that time with an emphasis on sensory and perceptual topics Out of print for many years the Tetralogy is now available again as a set for the first time which is as the author envisaged it or as individual volumes

The Perception of Dotted Forms William R. Uttal, 2014-02-25 First published in 1987 This book is the fourth in a series of research monographs reporting the results of a continuing study

that deals with the perception of form in two and three dimensional space On Seeing Forms William R. Uttal, 2014-06-27
Originally published in 1988 this is the final volume in the set The original intent of the tetralogy was to review neural explanations of high level perceptual and cognitive processes However at this point it became clear that there were few neural explanations of perceptual topics a situation that still persists today This book therefore used a different framework examining the role of detection discrimination and recognition at the behavioral level Investigative Ophthalmology & Visual Science , 1995-03 **Distributed Neural Systems** William R. Uttal, 2009 Toward a New Behaviorism William R. Uttal, 1998 This volume examines the scientific basis of reductionist approaches to understanding visual perception The author makes the provocative argument that contemporary neuroscience and cognitive science have gone off on a wild goose chase in the search for reductionist explanations of perceptual phenomena This book considers some specific and general examples of this misdirection and suggests an alternative future course for science It reviews the successes and failures of the sciences efforts to explain perceptual and other mental functions in the terms of either internal cognitive mechanisms formal models or the neural structures from which the brain the organ of the mind is constructed Although this is an iconoclastic and minority view the book shows how many contemporary perceptual scientists have qualified their thinking with regard to what their data and theories mean even while generally accepting the empirical findings It is without question an attempted refutation of some of the primary assumptions of contemporary theory Summing up the author s convictions concerning some of the most important questions of human nature this book is a statement of a point of view that has provided a framework for his personal answers to some of these important questions of human history **Perception** , 1995
Government Reports Announcements & Index , 1984-05 **Spatial Vision** , 1985 *Towards Third Generation Robotics* Bernard Espiau, 1987 The aim of this conference was to constitute a platform of international information exchange on advanced robotics The topics of the conference cover as well as basic research applications in control modelling vision mobile robots sensing programming and teleoperation In addition the conference provides an opportunity for the exchange of information on the progress of various national and international research and development projects **Immeasurable Mind** William R. Uttal, 2007-06-05 Is psychology a science Unlike Darwinian theory in biology or relativity and quantum theory in physics psychology lacks the basic quantitative or conceptual foundation for a consensus view about how the mind works Is psychology on the verge of developing such a foundation Probably not answers psychologist William R Uttal in this iconoclastic and critical examination of psychology s underlying principles assumptions and concepts In five in depth chapters and one appendix he explores the following key issues What do we mean by science and can psychology be legitimately described as a science What are the general principles that should be applied to any science What is the role of mathematics in psychology Given the current fragmented state of the discipline is it possible to identify the general principles of a scientific psychology Is experimental psychology just applied epistemology and not really scientific Uttal

comes to the conclusion that psychology is a science only to the extent that it is behaviorist in orientation By comparing his discipline to other sciences he identifies its limits establishes a set of principles that help to define psychology as a science and suggests plausible future developments *Behavior & Society* ,1984 Aerospace Medicine and Biology ,1984-07
