Developing Thinking in Geometry Sue Johnston-Wilder, John Mason, 2005-09-14 This text and interactive CD ROM help teachers extend their instructional practices through innovative approaches for teaching geometry as developed by the Open University's Centre for Mathematics Education

Developing Essential Understanding of Algebraic Thinking for Teaching Mathematics in Grades 3-5 Maria L. Blanton, 2011 Like algebra at any level early algebra is a way to explore analyse represent and generalise mathematical ideas and relationships This book shows that children can and do engage in generalising about numbers and operations as their mathematical experiences expand The authors identify and examine five big ideas and associated essential understandings for developing algebraic thinking in grades 3-5 The big ideas relate to the fundamental properties of number and operations the use of the equals sign to represent equivalence variables as efficient tools for representing mathematical ideas quantitative reasoning as a way to understand mathematical relationships and functional thinking to generalise relationships between covarying quantities The book examines challenges in teaching learning and assessment and is interspersed with questions for teachers reflection

Teaching and Learning Algebraic Thinking with 5- to 12-Year-Olds Carolyn Kieran, 2017-12-04 This book highlights new developments in the teaching and learning of algebraic thinking with 5 to 12 year olds Based on empirical findings gathered in several countries on five continents it provides a wealth of best practices for teaching early algebra Building on the work of the ICME 13 International Congress on Mathematical Education Topic Study Group 10 on Early Algebra well known authors such as Luis Radford John Mason Maria Blanton Deborah Schifter and Max Stephens as well as younger scholars from Asia Europe South Africa the Americas Australia and New Zealand present novel theoretical perspectives and their latest findings The book is divided into three parts that focus on i epistemological mathematical aspects of algebraic thinking ii learning and iii teaching and teacher development Some of the main threads running through the book are the various ways in which structures can express themselves in children's developing algebraic thinking the roles of generalization and natural language and the emergence of symbolism Presenting vital new data from international contexts the book provides additional support for the position that essential ways of thinking algebraically need to be intentionally fostered in instruction from the earliest grades

Developing

Thinking in Statistics Alan Graham, 2006-03-23 This book should prove to be an important addition to the relatively few publications that exist on statistical thinking. It very nicely encourages the reader to take an active learning approach through simultaneously promoting pedagogy with knowledge and skills enhancement in statistics. Understanding what the subject is for and what it can do are crucial in statistical education by getting the reader to think statistically. Mr Graham has provided us with a very readable book that helps to dispel the poor reputation that statistics has acquired over many years. Professor Neville Davies, Director Royal Statistical Society Centre for Statistical Education, Nottingham Trent University, Statistics is a key area of the school mathematics curriculum where maths and the real world meet. Although potentially a subject where teaching can be motivating and relevant to everyday concerns, it is often seen as boring and involving largely mechanical calculations. This book will enable teachers and others interested in statistical thinking to become excited and inspired by the big ideas of statistics and in turn teach them enthusiastically. Learners designed to heighten awareness of statistical ideas, the book explores key themes within statistics using ideas developed by the influential team at The Open University's Centre for Mathematics Education. Themes include Measurement, Variation, Randomness, Uncertainty. Arranged in an accessible task-based format, this is an essential text for all secondary maths teachers and students of maths education. It is a comprehensive book that will illuminate and inspire interest in the subject based on innovative use of ICT, engaging narrative, firm research and good practice. **Developing Thinking in Statistics** is a set book on the Open University Course ME626 Developing Statistical Thinking, part of the Graduate Diploma in Mathematics Education. **Developing Algebraic Thinking** Clemson University, Carolina Biological Supply Company, 2005. [Making Sense of Algebra](#) Ernest Paul Goldenberg, June Mark, Jane M. Kang, 2015. This book has much to offer teachers of middle and high school algebra who wish to implement the Common Core Standards for all of their students. Hyman Bass, Samuel Eilenberg, Distinguished University Professor of Mathematics, but what if you could guide your students to expect mathematics to make sense? What if you could help them develop a deep understanding of the reasons behind its facts and methods? In *Making Sense of Algebra*, the common misconception that algebra is simply a collection of rules to know and follow is debunked by delving into how we think about mathematics. This habits of mind approach is concerned not just with the results of mathematical thinking but with how mathematically proficient students do that thinking. *Making Sense of Algebra* addresses developing this type of thinking in your students through using well-chosen puzzles and investigations to promote perseverance and a willingness to explore, seeking structure and looking for patterns that mathematicians anticipate finding and using this to draw conclusions, cultivating an approach to authentic problems that are rarely as tidy as what is found in textbooks, allowing students to generate, validate and critique their own and others' ideas without relying on an outside authority. Through teaching tips, classroom vignettes and detailed examples, *Making Sense of Algebra* shows how to focus your instruction on building these key habits of mind while inviting students to experience the clarity and meaning of mathematics perhaps for the first time.
