*Evaluation and comparison of Ajax Frameworks regarding applicability, productivity and technical limitations* Lukas Ostermaier, 2008-03-11 Inhaltsangabe Abstract For some years the Internet has been dominated by phrases like Web 2.0 and Ajax The catchword Web 2.0 which was originally established by O'Reilly at the first Web 2.0 conference in October 2004 not only describes a new way of perception and usage of the internet e.g. social software like blogs wikis etc but also stands for more or less innovative techniques as for instance RSS or Ajax The latter is a combination of techniques that have been available since the late 1990s such as JavaScript asynchronous requests and XML However the term Ajax only exists since Jesse James Garret introduced it in his article in February 2005 Since then Ajax has experienced a real hype Google Mail Google Maps or Flickr just serve as examples for the mass of applications that have to attribute their success substantially to Ajax When it comes to web application development there has also been a lot of progress in the field of Ajax Ajax frameworks of all kinds massively gained popularity and flooded the development

community From the biggest companies through to small development teams almost everyone has published his own Ajax framework or library in the last two years In the meantime there are far more than 150 different frameworks for various programming languages and diverse aims Because of this uncontrolled growth of frameworks it is quite difficult to say which of those is most suitable for a specific project There are two key questions that have to be considered in case of Ajax or Rich Internet Applications RIAs in general How can Ajax significantly increase the business value of an application and how can it be applied productively This thesis mainly focuses on the latter question by evaluating three Ajax frameworks of large companies with a strong background by means of an example application with respect to commercial applicability productivity performance as well as enhancement and adaptation possibilities Furthermore this work discusses the technical limitations and problems of Ajax and provides an outlook on future developments in this area As example application for the evaluation a web based tracking system for public transportation is implemented Each single vehicle is visualized on a street map according to its current position By the implementation of this application with each of the three chosen Ajax frameworks their applicability productivity and performance is illustrated as well as

Dr. Dobb's Journal ,2007 Ajax Black Book, New Edition (With Cd) Kogent Solutions Inc.,2008-05 This book discusses what Ajax is and what it means to Web developers as well as the technologies behind Ajax applications Working through this book you ll discover how Ajax gives web developers the ability to build applications that are more interactive more dynamic more exciting and enjoyable for their users This book shows you how to write some basic applications that use client side JavaScript to request information from a Server side component and display it without doing a full page reload This book teaches you how to create applications according to Ajax principles It also presents several strategies for communicating between the client and the server including sending raw data and using XML or JSON JavaScript Object Notation for sending more complex collections of data AJAX A New Approach Understanding JavaScript for AJAX Asynchronous data transfer with XMLHttpRequest Implementing AJAX Frameworks Implementing Yahoo UI Library Implementing Google Web Toolkit Creating Maps in AJAX Creating ASP NET AJAX Application Integrating PHP and AJAX Integrating AJAX with JSF Integrating AJAX with Struts Faster data transfer with JSON in AJAX Understanding AJAX Patterns Consuming Web Services in AJAX Securing AJAX Applications Debugging the AJAX Application Introduction to ASP.NET Kathleen Kalata,2005 **Advanced ASP.NET AJAX Server Controls For .NET Framework 3.5** Adam Calderon,Joel Rumerman,2008-06-26 ASP NET AJAX server controls can encapsulate even the most powerful AJAX functionality helping you build more elegant maintainable and scalable applications This is the first comprehensive code rich guide to custom ASP NET AJAX server controls for experienced ASP NET developers Unlike other books on ASP NET AJAX this book focuses solely on server control development and reflects the significant improvements in ASP NET 3 5 AJAX and the latest Visual Studio 2008 features for streamlining AJAX development Adam Calderon and Joel Rumerman first review the core Microsoft AJAX Library and JavaScript techniques needed to support a rich client side

experience Next they build upon these techniques showing how to create distributable AJAX enabled controls that include rich browser independent JavaScript client side functionality The authors thoroughly explain both the JavaScript and NET aspects of control development and how these two distinct environments come together to provide a foundation for building a rich user experience using ASP NET AJAX Create object oriented cross browser JavaScript that supports NET style classes interfaces inheritance and method overloading Work with components behaviors and controls and learn how they relate to DOM elements Learn Sys Application and the part it plays in object creation initialization and events in the Microsoft AJAX Library Build Extender and Script controls that provide integrated script generation for their corresponding client side counterparts Localize ASP NET AJAX controls including client script Discover ASP NET AJAX client and server communication architecture and the new support for Windows Communication Foundation WCF Understand ASP NET AJAX Application Services Create custom Application Services Design controls for a partial postback environment Understand the AJAX Control Toolkit architecture and the many features it provides Develop highly interactive controls using the AJAX Control Toolkit Understand AJAX Control Toolkit architecture and build controls that utilize the toolkit      **Decision**
