Developing The Environment:

Developing The Environment C Barrow, 2014-09-19 This book presents a comprehensive overview of global environmental problems past present and future examining their roots and implications and suggesting where possible ways in which they might be mitigated or avoided by careful management

What Next for Sustainable Development? James Meadowcroft, David Banister, Erling Holden, Oluf Langhelle, Kristin Linnerud, Geoffrey Gilpin, 2019 This book examines the international experience with sustainable development since the concept was brought to world wide attention in Our Common Future the 1987 report of the World Commission on Environment and Development Scholars from a variety of disciplinary backgrounds engage with three critical themes negotiating environmental limits equity environment and development and transitions and transformations In light of the 2030 Sustainable Development Goals recently adopted by the United Nations General Assembly they ask what lies ahead for sustainable development

Learning, Environment and Sustainable Development William Scott, Paul Vare, 2020-11-11 This book is an introduction to the long history of human learning the environment and sustainable development about our struggles with the natural world first for survival then for dominance currently for self preservation and in future perhaps even for long term mutually beneficial co existence It charts the long arc of human environment relationships through the specific lens of human learning putting on record many of the people ideas and events that have contributed often unwittingly to the global movement for sustainable development Human learning has always had a focus on the environment It s something we ve been engaged in ever since we began interacting with our surroundings and thinking about the impacts outcomes and consequences of our actions and interactions This unique story told by the authors is episodic rather than a connected linear account it probes questions and re examines familiar issues from novel perspectives and looks ahead The book is of particular interest to those studying and teaching courses with a focus on socio economic and environmental sustainability and non governmental organisations whose work brings them face to face with the general public and social enterprises

Green Development William Mark Adams, 2001 This revised and updated new edition retains the clear and powerful argument which characterized the original It gives a valuable analysis of the theory and practice of sustainable development and suggests that at the start of the new millennium we should think radically about the challenge of sustainability Fully revised this latest edition includes further reading chapter outlines chapter summaries and new discussion topics and explores the roots of sustainable development thinking and its evolution in the last three decades of the twentieth century the dominant ideas within mainstream sustainable development the nature and diversity of alternative ideas about sustainability the problems of environmental degradation and the environmental impacts of development strategies for building sustainability in development from above and below Offering a synthesis of theoretical ideas on sustainability based on the industrialized economies of the North and the practical applied ideas in the South which tend to ignore First World theory this important text gives a clear discussion of

theory and extensive practical insights drawn from Africa Latin America and Asia Economic Development and Environmental Sustainability Ramón López, Michael A. Toman, 2006 Publisher description *Sustainable Development* Susan Baker, 2006 Environment and Sustainable Development answers the need for an introductory comprehensive yet critical book that explores the challenges involved in the implementation of sustainable development Guide to Sustainable Development and Environmental Policy Natalia Mirovitskaya, William L Ascher, 2001 A compilation of definitions terms and critical commentary on aspects of sustainable development and environmental policy with a strong emphasis on policy tools policy practices and systems of international environmental governance **Heredity and Environment in the Development of Men** Edwin Grant Conklin, 1929 *Handbook of Sustainable Development* Giles Atkinson, Simon Dietz, Eric Neumayer, 2007 Years on from the 1987 Brundtland Report it has become clear that formidable challenges confront policy makers who have publicly stated their commitment to the goal of sustainable development This text provides an account of the progress made in fleshing out these issues *Transformational Change for People and the Planet* Juha I. Uitto, Geeta Batra, 2022-01-14 This Open Access book deals with the pressing question of how to achieve transformational change that reconciles development with environmental sustainability It particularly focuses on the role of evaluation in finding sustainable solutions Environment and development are closely interlinked as are human health and ecosystem health The pandemic that began in 2020 demonstrated in no uncertain terms how destruction of habitats has allowed hitherto unknown pathogens spill over to humans wreaking havoc on people's lives and livelihoods We are already seeing the impacts of global climate change in terms of heatwaves forest fires and increased storms The Sustainable Development Goals SDGs explicitly recognize the equal importance of the social economic and environmental dimensions of development In these turbulent times when humankind faces multiple complex challenges it is essential to know that our responses are effective and that they make a positive difference Evaluation can provide invaluable lessons to how we design policies strategies and programs and how we allocate limited resources between competing priorities This book brings together key thinkers and practitioners from the public and private sectors from major multilateral organizations and from bilateral donor agencies to present the latest knowledge and experience on how to evaluate interventions in the nexus of environment and development The book does not promote any particular approach or methodology but rather emphasizes the need for mixed methods to address the question at hand in the best and most suitable manner It covers cases from a variety of fields from climate change mitigation and adaptation energy efficiency and renewable energy natural resources management biodiversity conservation and more This book is not a conference proceedings although it has its roots in the Third International Conference on Evaluating Environment and Development organized by the GEF Independent Evaluation Office in October 2019 The conference brought together a larger number of established and upcoming evaluators researchers and evaluation users from the Global North and South representing a wide variety of organizations to discuss the frontiers of environment and development evaluation

Following the conference the editors identified and contacted the participants who made key contributions at the conference and asked them to develop their ideas and papers into book chapters according to a coherent plan **Valuing**

Development, Environment and Conservation Sarah Bracking,Aurora Fredriksen,Sian Sullivan,Philip

Woodhouse,2018-10-17 Policy makers are increasingly trying to assign economic values to areas such as ecologies the atmosphere even human lives These new values assigned to areas previously considered outside of economic systems often act to qualify alter or replace former non pecuniary values Valuing Development Environment and Conservation looks to explore the complex interdependencies contradictions and trade offs that can take place between economic values and the social environmental political and ethical systems that inform non monetary valuation processes Using rich empirical material the book explores the processes of valuation their components calculative technologies and outcomes in different social ecological and conservation domains The book gives reasons for why economic calculation tends to dominate in practice but also presents new insights on how the disobedient materiality of things and the ingenuity of human and non human agencies can combine and frustrate the dominant economic models within calculative processes This book highlights the tension between on the one hand a dominant model that emphasises technical and universalising criteria and on the other hand valuation practice in specific local contexts which is more likely to negotiate criteria that are plural incommensurable and political This book is perfect for researchers and students within development studies environment geography politics sociology and anthropology who are looking for new insights into how processes of valuation take place in the 21st century and with what consequential outcomes [Conference Proceedings--environment and Development](#) Libby

Bassett,1983 **Evaluating Sustainable Development** Peter S. Brandon,Patrizia Lombardi,2009-02-18 Sustainable development has been characterised by an emphasis on environmental issues and an ad hoc approach to structuring the subject which hinders the development of knowledge in a systematic way The built environment contributes significantly to the environment but is also one of the major factors in determining whether a community is sustainable in the longer term A structure is required which aids definition provides a common set of values establishes measurement methods to define progress and suggests a management system and decision protocol which enables practitioners to engage and use the resultant structures and information This book provides a suggested structure in which all aspects of sustainable development can be included together with a set of evaluation techniques which can be used within the structure to provide assistance to decision making [Java Spring Framework Mastery: Advanced Techniques and Best Practices](#) Adam Jones,2025-01-16

Environment and Development: An Economic Approach Jan Bojö, Karl-Göran Mäler, Lena Unemo, 2012-12-06 This book is a thoroughly revised text based on a report commissioned by the Swedish International Development Authority SIDA The financial grant from SIDA which made the work possible is hereby gratefully acknowledged We gratefully accepted the offer from Kluwer Academic Publishers to revise the text Hopefully the text can be of interest to decision makers development programme personnel teachers and the general public interested in how economics can contribute to better environmental decision making There are already many books on the market about environmental economics some of them very good What is special about this one We do not claim to have obtained new results but we have our own way of presenting the subject matter In particular we are of the opinion that policy failures are often overlooked as an obstacle to efficient environmental management Although the main emphasis in this book is on project level analysis it is essential that such analyses be linked to an understanding of the disincentives for environmental improvements that general economic and particular environmental policies provide Another essential feature of the book although this is not unique is the links provided between theory and empirical illustrations We hope that this will illustrate to our readers the practical usefulness but also the difficulties of applying economics to environmental problems In principle this book can be read by anyone interested in the subject matter without any formal education in economics However some background in microeconomic theory makes the reading easier

Environmental Change and Human Development Chris Barrow, 2014-04-04

Environmental Change and Human Development focuses on environmental change and human fortunes While there is a large and rapidly expanding literature dealing with how people affect the environment less attention has been given in recent years to how the environment shapes human development In an ever more crowded world there is a need for anticipatory environmental management and a crucial input to this is consideration of the interaction between environment and humans The environment is not as stable benign or controllable as people like to think The world population is vastly larger than it has ever been and is still growing and humans increasingly upset nature through pollution and other activities While modern communications may help environmental managers rapid travel also increases the dispersal of diseases and pests Technological advance and social development is not all beneficial some innovations have the effect of making people more vulnerable to disruption by natural disaster and citizens are often less able to cope with changed conditions than people were in the past *Environmental Change and Human Development* addresses key issues such as soil degradation natural climatic variations and volcanic activity and provides geography and earth sciences students with an essential introduction to the major debates surrounding this topic
