Development Of Emotions And Their Regulation An Internalization Model:

Development of Emotions and Emotion Regulation Manfred Holodyski, Wolfgang Friedlmeier, 2006-10-26 vii
PREFACE It was 13 years ago that we met for the first time at a German developmental psychology conference One of us Wolfgang Friedlmeier WF was interested in ontogenetic development from a cross cultural perspective He presented a study on the development of empathy and distress in preschool age dealing with how far children from different cultures respond to comparable demands with different emotions and regulation strategies The other Manfred Holodyski MH was interested in ontogenetic development from the perspective of internalization how processes that are originally socially distributed between persons are transformed into mental processes within the individual He presented a study on the development of the emotions pride and shame in preschool age This led the two of us to discover our common interest in central issues of emotional development What role do the emotions play in an individual's activity regulation What is it exactly that is developing when we talk about emotional development Do emotional processes have a social genesis And what is the role of the early social interactions between children and their caregivers along with the obvious fact that individuals grow up and live in completely different cultures Even at this time we both already suspected that the social and cultural embedment of the individual would prove to be a key to understanding how the diversity of human emotions and their regulation develop

Emotions as Bio-cultural Processes Birgitt Röttger-Rössler, Hans Jürgen Markowitsch, 2009-06-12 Emotions have emerged as a topic of interest across the disciplines yet studies and findings on emotions tend to fall into two camps body versus brain nature versus nurture Emotions as Bio cultural Processes offers a unique collaboration across the biological social divide from psychology and neuroscience to cultural anthropology and sociology as 15 noted researchers develop a common language theoretical basis and methodology for examining this most sociocognitive aspect of our lives Starting with our evolutionary past and continuing into our modern world of social classes and norms these multidisciplinary perspectives reveal the complex interplay of biological social cultural and personal factors at work in emotions with particular emphasis on the nuances involved in pride and shame A sampling of the topics 1 The roles of the brain in emotional processing 2 Emotional development milestones in childhood 3 Social feeling rules and the experience of loss 4 Emotions as commodities The management of feelings and the self help industry 5 Honor and dishonor societal and gender manifestations of pride and shame 6 Emotion regulation and youth culture 7 Pride and shame in the classroom A volume of such wide and integrative scope as Emotions as Bio cultural Processes should attract a large cohort of readers on both sides of the debate among them emotion researchers social and developmental psychologists sociologists social anthropologists and others who analyze the links between humans that on the one hand differentiate us as individuals but on the other hand tie us to our socio cultural worlds
