Development Of Molecular Beacons For Nucleic Acid Detection:

Development of molecular beacons for nucleic acid detection Salvatore Angelo Efisio Marras, 2003 **Fluorescence Sensors and Biosensors** Richard B. Thompson, 2005-12-16 Fluorescence based sensing is a significant technique used in prominent fields such as fluorescence activated cell sorting DNA sequencing high throughput screening and clinical diagnostics Fluorescence Sensors and Biosensors emphasizes the most recent developments and emerging technologies with the broadest impacts The text begins with **Bioelectrochemistry Research Developments** Eias M. Bernstein, 2008 Bioelectrochemistry deals with the electrochemical aspects of biology and biological aspects of electrochemistry This book presents recent and important advances in the field **Engineering in Translational Medicine** Weibo Cai, 2013-12-19 This book covers a broad area of engineering research in translational medicine Leaders in academic institutions around the world contributed focused chapters on a broad array of topics such as cell and tissue engineering 6 chapters genetic and protein engineering 10 chapters nanoengineering 10 chapters biomedical instrumentation 4 chapters and theranostics and other novel approaches 4 chapters Each chapter is a stand alone review that summarizes the state of the art of the specific research area Engineering in Translational Medicine gives readers a comprehensive and in depth overview of a broad array of related research areas making this an excellent reference book for scientists and students both new to engineering translational medicine and currently working in this area The ability for engineering approaches to change biomedical research are increasing and having significant impact Development of basic assays and their numerous applications are allowing for many new discoveries and should eventually impact human health This book brings together many diverse yet related topics to give the reader a solid overview of many important areas that are not found together elsewhere Dr Weibo Cai has taken great care to select key research leaders of many sub disciplines who have put together very detailed chapters that are easy to read yet highly rich in content _____ This book brings together many diverse yet related topics to give the reader a solid overview of many important areas that are not found together elsewhere Dr Weibo Cai has taken great care to select key research leaders of many sub disciplines who have put together very detailed chapters that are easy to read yet highly rich in content It is very exciting to see such a great set of chapters all together to allow one to have a key understanding of many different areas including cell gene protein and nano engineering as well as the emerging field of theranostics I am sure the readers will find this collection of important chapters helpful in their own research and understanding of how engineering has and will continue to play a critical role in biomedical research and clinical translation Sanjiv Sam Gambhir M D Ph D Stanford University USA Engineering in Translational Medicine is a landmark book bridging the fields of engineering and medicine with a focus on translational technologies and methods In a single well coordinated volume this book brings together contributions from a strong and international scientific cast broadly covering the topics The book captures the tremendous opportunities made possible by recent developments in bioengineering and highlights the

potential impact of these advances across a broad spectrum of pressing health care needs The book can equally serve as a text for graduate level courses a reference source a book to be dipped into for pleasure by those working within the field or a cover to cover read for those wanting a comprehensive yet readable introduction to the current state of engineering advances and how they are impacting translational medicine Simon R Cherry Ph D University of California Davis USA

Catalytically Active Nucleic Acids Harald Seitz, Frank Stahl, Johanna-Gabriela Walter, 2019-09-30 This volume reviews numerous reaction mechanisms and applications of nucleic acids with catalytic activity Written by an interdisciplinary team of authors it provides an essential overview of these acids fundamental aspects while also addressing associated methodologies such as nucleic acid enzyme engineering peroxidase mimicking DNAzymes and Aptazymes After the discovery of natural ribozymes RNA molecules that mediate the cleavage and formation of phosphodiester bonds and the formation of peptide bonds numerous artificial ribozymes with altered catalytic activities were produced by in vitro and in vivo selection Unlike ribozymes DNAzymes do not occur in nature Although the catalytic activity of nucleic acid enzymes is usually much slower than that of proteins nucleic acid enzymes with comparable catalytic activity have been obtained using stringent selection processes The key advantages of these enzymes they are e g smaller easier to produce and purify than proteins and can withstand denaturation e g by heat Over the last few years the number of publications on the applications of enzymatic nucleic acids has grown steadily Summarizing the fundamentals and applications of these acids this book will not only be an excellent resource for experts in the field but will also guide young researchers just starting out in this significant area
