Development of face processing

This article reviews the development of the face-processing system from birth, during infancy and through childhood, until it becomes the sophisticated system observed in adults. We begin by discussing the following major theoretical issues concerning the development of face expertise: (1) nature versus nurture or the role of experience in face processing, (2) level of processing (i.e., global, basic, subordinate, individual) and expertise, and (3) type of processing (i.e., holistic, configural, featural). This general overview will be followed by a closer examination of individual studies that investigate the development of face processing. These studies will include a review of (1) development of differential processing of faces and objects, (2) development of differential processing of faces of different species, (3) developmental changes in processing facial identity, and (4) developmental changes in the categorization of faces. Our review of the developmental literature reveals early competence in face-processing abilities with infants presenting a preference for face stimuli and facial discrimination using featural, configural, and holistic cues. This early competence is then later refined as evidenced by age-related changes throughout childhood. Some of the refinements are likely due to the development of general cognitive abilities, whereas some others may be face-specific. © 2011 John Wiley & Sons, Ltd. INTRODUCTION

Recognition of individuals at first sight is extremely important for social species such as human and nonhuman primates. An individual's decision to fight, flee, mate, cooperate, or seek protection often depends on the outcome of such recognition. If some species recognize individuals using olfaction or audition,[1] primates will primarily do it via their visual system, using faces. Although it is still controversial as to whether humans' superior face-processing abilities reflect an innate, specialized face-processing

mechanism, or a more general phenomenon of visual learning due to massive exposure to faces,[2–5] most researchers agree that (1) adults are experts in face processing and (2) adults' ability to process faces is tuned by their experience.

Faces are multidimensional visual stimuli, providing a broad range of information to an observer.[6] This information can be organized into two major categories: face traits and face states. Face traits refer to the visual information in the face that is relatively permanent and stable. These traits include: faceness (face or non-face), species (e.g., humans or dogs), gender (male or female), race (e.g., Chinese or Caucasian), aesthetics (attractive or unattractive), age (old or young), and identity (e.g., John or Mary). Face states refer to dynamic and transient facial cues. Face-state information is used to process speech (e.g., the McGurk effect), emotional expressions, attention, and intentions.[7] Exactly which components of the face-processing system are present at birth, which develop first, and at what stage the system becomes adult-like are still hotly debated topics. However, we will not talk about face states here.

Viewing a face triggers at least two automatic and fast processes: *categorization* of the stimulus

Development Of Face Processing:

The Development of Face Processing in Infancy and Early Childhood Olivier Pascalis,Alan Slater,2003 This book on face perception is one of the most researched areas in infancy and early childhood because of the enormous information that the face conveys to its viewer both in terms of the recognition of individuals and in the expressive information that faces convey It remains a complex area but a number of theoretical issues have emerged which motivate much of the current research This book describes many of these issues and also presents some empirical research findings to illustrate the ways in which researchers carry out their investigations   *The Development of Face Processing* Gudrun Schwarzer,Helmut Leder,2003 This book draws together for the first time the latest scientific findings from leading international researchers on how face recognition develops It is only in recent years that methods acceptable in experimental psychology have been developed for studying this vital and unique process While other publications have concentrated on computer modeling and of face processing and the like this one is unique in that it looks at fundamental and so far unanswered questions such as What are the roots of and reasons for our ability to recognize faces How much of this ability is learned and how much innate By connecting studies on face processing in infancy with those on the development of face processing it thus bridges the gap between face processing research and visual perceptual development Leading researchers from USA and Europe who have conducted pioneering work in these domains describe results and anticipate future inquiry covering topics such as fundamental cognitive abilities in infancy development of face processing from infancy to adulthood and the effects of expertise on face recognition   **Handbook of Research on Face Processing** A.W. Young,H.D. Ellis,2013-10-22 The high degree of scientific interest in face processing is readily understandable since people s faces provide such a wealth of social information Moreover investigations have produced evidence of highly precocious face processing abilities in infants and of neural mechanisms in adults that seem to be differentially involved in face perception Such findings demonstrate that as one might expect the psychological importance of the face has clear biological underpinnings There are also urgent practical reasons for wanting to understand face processing The most extensively investigated of these involve forensic issues Other applications include the development of automated recognition systems for security and other purposes and understanding and rehabilitating disorders and impairments linked to brain injuries and psychiatric conditions Current studies of face processing are grouped in the volume into eleven topic areas For each area the editors approached an acknowledged authority and commissioned a review chapter summarising the findings that have been made These chapters were then circulated to other experts who were asked to write brief commentaries that developed theoretical or empirical points of importance to each area In this way a balanced coverage of each topic is achieved The book begins with a section examining the evidence suggesting that there may be something special about face processing This is followed by consideration of the face as a visual pattern Then there are four sections dealing with major uses of facial information followed by sections

discussing the development of face processing abilities and the neural mechanisms involved The last three sections of the book deal with topics for which there are important practical applications for the studies reported *The Role of Facial Movements in Face Processing and Its Development* Naiqi Xiao,2016 Our visual processing system is largely shaped by the environment in which we live Human faces as one of the most commonly seen stimuli exert unparalleled influence in our visual system and its development In the past half century researchers have extensively studied face processing which has greatly broadened our understandings of visual perception Most of these prior studies used static face images as experiment stimuli In the real world faces are mostly moving people smile talk and nod Prior studies reported unique contributions of facial movements in facilitating face recognition in infants and adults The underlying perceptual mechanisms for processing moving faces however are still unclear In particular our current understanding about face processing is limited to evidence from studies using static faces It is an open question as to whether our understanding about static face processing can help us understand face processing in the real world where faces are moving The current thesis specifically addresses this theoretically important question by examining the roles of facial movements in the development of face perception in infancy childhood adolescence and adulthood Results from Chapter 2 demonstrated that moving faces facilitated part based face processing in children adolescents and adults In the first year of life infants exhibited a left visual field bias in their face scanning pattern only for natural moving faces but not for artificial moving ones Chapter 3 Infants scanned moving faces differently from static ones Their scanning pattern for moving faces but not for static faces predicted their face discrimination performance Chapters 4 5 These studies consistently show crucial roles of facial movements in the development of face perception from infancy to adulthood My research has laid an important foundation for future studies to understand real world face processing and the underlying perceptual and neural mechanisms <u>Special Issue</u> ,2013

Handbook of Developmental Social Neuroscience Michelle De Haan,Megan R. Gunnar,2009-04-02 Recent years have seen an explosion of research into the physiological and neural bases of social behavior This state of the science handbook is unique in approaching the topic from a developmental perspective Exploring the dynamic relationship between biology and social behavior from infancy through adolescence leading investigators discuss key processes in typical and atypical development Chapters address emotion motivation person perception interpersonal relationships developmental disorders and psychopathology The volume sheds light on how complex social abilities emerge from basic brain circuits whether there are elements of social behavior that are hard wired in the brain and the impact of early experiences Illustrations include 8 color plates **The Development of Face Perception & Facial Expression Processing** Nim Tottenham,2005

Development Of Face Processing Introduction

In todays digital age, the availability of Development Of Face Processing books and manuals for download has revolutionized the way we access information. Gone are the days of physically flipping through pages and carrying heavy textbooks or manuals. With just a few clicks, we can now access a wealth of knowledge from the comfort of our own homes or on the go. This article will explore the advantages of Development Of Face Processing books and manuals for download, along with some popular platforms that offer these resources. One of the significant advantages of Development Of Face Processing books and manuals for download is the cost-saving aspect. Traditional books and manuals can be costly, especially if you need to purchase several of them for educational or professional purposes. By accessing Development Of Face Processing versions, you eliminate the need to spend money on physical copies. This not only saves you money but also reduces the environmental impact associated with book production and transportation. Furthermore, Development Of Face Processing books and manuals for download are incredibly convenient. With just a computer or smartphone and an internet connection, you can access a vast library of resources on any subject imaginable. Whether youre a student looking for textbooks, a professional seeking industry-specific manuals, or someone interested in self-improvement, these digital resources provide an efficient and accessible means of acquiring knowledge. Moreover, PDF books and manuals offer a range of benefits compared to other digital formats. PDF files are designed to retain their formatting regardless of the device used to open them. This ensures that the content appears exactly as intended by the author, with no loss of formatting or missing graphics. Additionally, PDF files can be easily annotated, bookmarked, and searched for specific terms, making them highly practical for studying or referencing. When it comes to accessing Development Of Face Processing books and manuals, several platforms offer an extensive collection of resources. One such platform is Project Gutenberg, a nonprofit organization that provides over 60,000 free eBooks. These books are primarily in the public domain, meaning they can be freely distributed and downloaded. Project Gutenberg offers a wide range of classic literature, making it an excellent resource for literature

enthusiasts. Another popular platform for Development Of Face Processing books and manuals is Open Library. Open Library is an initiative of the Internet Archive, a non-profit organization dedicated to digitizing cultural artifacts and making them accessible to the public. Open Library hosts millions of books, including both public domain works and contemporary titles. It also allows users to borrow digital copies of certain books for a limited period, similar to a library lending system. Additionally, many universities and educational institutions have their own digital libraries that provide free access to PDF books and manuals. These libraries often offer academic texts, research papers, and technical manuals, making them invaluable resources for students and researchers. Some notable examples include MIT OpenCourseWare, which offers free access to course materials from the Massachusetts Institute of Technology, and the Digital Public Library of America, which provides a vast collection of digitized books and historical documents. In conclusion, Development Of Face Processing books and manuals for download have transformed the way we access information. They provide a cost-effective and convenient means of acquiring knowledge, offering the ability to access a vast library of resources at our fingertips. With platforms like Project Gutenberg, Open Library, and various digital libraries offered by educational institutions, we have access to an ever-expanding collection of books and manuals. Whether for educational, professional, or personal purposes, these digital resources serve as valuable tools for continuous learning and self-improvement. So why not take advantage of the vast world of Development Of Face Processing books and manuals for download and embark on your journey of knowledge?
