Development Of Modern Science:

Making Modern Science Peter J. Bowler, Iwan Rhys Morus, 2010-02-24 The development of science according to respected scholars Peter J Bowler and Iwan Rhys Morus expands our knowledge and control of the world in ways that affect but are also affected by society and culture In Making Modern Science a text designed for introductory college courses in the history of science and as a single volume introduction for the general reader Bowler and Morus explore both the history of science itself and its influence on modern thought Opening with an introduction that explains developments in the history of science over the last three decades and the controversies these initiatives have engendered the book then proceeds in two parts The first section considers key episodes in the development of modern science including the Scientific Revolution and individual accomplishments in geology physics and biology The second section is an analysis of the most important themes stemming from the social relations of science the discoveries that force society to rethink its religious moral or philosophical values Making Modern Science thus chronicles all major developments in scientific thinking from the revolutionary ideas of the seventeenth century to the contemporary issues of evolutionism genetics nuclear physics and modern cosmology Written by seasoned historians this book will encourage students to see the history of science not as a series of names and dates but as an interconnected and complex web of relationships between science and modern society The first survey of its kind Making Modern Science is a much needed and accessible introduction to the history of science engagingly written for undergraduates and curious readers alike

Making Modern Science, Second Edition Peter J. Bowler, Iwan Rhys Morus, 2020-08-17 In this new edition of the top selling coursebook seasoned historians Peter J Bowler and Iwan Rhys Morus expand on their authoritative survey of how the development of science has shaped our world Exploring both the history of science and its influence on modern thought the authors chronicle the major developments in scientific thinking from the revolutionary ideas of the seventeenth century to contemporary issues in genetics physics and more Thoroughly revised and expanded the second edition draws on the latest research and scholarship It also contains two entirely new chapters one that explores the impact of computing on the development of science and another that shows how the West used science and technology as tools for geopolitical expansion Designed for entry level college courses and as a single volume introduction for the general reader Making Modern Science presents the history of science not as a series of names and dates but as an interconnected and complex web of relationships joining science and society

The Birth of Modern Science Paolo Rossi, 2001-06-18 This history of the birth of modern science shatters the illusion that science is dry and divorced from culture by exploring the powerful clashes between traditions and value systems that gave rise to it The author shows how many of the characteristics that distinguish science today emerged in the midst of the wars and plagues of the seventeenth century and defines what was new about this form of knowledge

Companion to the History of Modern Science G N Cantor, G.N. Cantor, J.R.R. Christie, M.J.S. Hodge, R.C. Olby, 2020-10-07 The 67 chapters of this book describe and analyse the

development of Western science from 1500 to the present day Divided into two major sections The Study of the History of Science and Selected Writings in the History of Science the volume describes the methods and problems of research in the field and then applies these techniques to a wide range of fields Areas covered include the Copernican Revolution Genetics Science and Imperialism the History of Anthropology Science and Religion Magic and Science The companion is an indispensable resource for students and professionals in History Philosophy Sociology and the Sciences as well as the History of Science It will also appeal to the general reader interested in an introduction to the subject The Rise of Modern Science Explained H. Floris Cohen, 2015-09-24 For centuries laymen and priests lone thinkers and philosophical schools in Greece China the Islamic world and Europe reflected with wisdom and perseverance on how the natural world fits together As a rule their methods and conclusions while often ingenious were misdirected when viewed from the perspective of modern science In the 1600s thinkers such as Galileo Kepler Descartes Bacon and many others gave revolutionary new twists to traditional ideas and practices culminating in the work of Isaac Newton half a century later It was as if the world was being created anew But why did this recreation begin in Europe rather than elsewhere This book caps H Floris Cohen s career long effort to find answers to this classic question Here he sets forth a rich but highly accessible account of what against many odds made it happen and why How Modern Science Came Into the World H. F. Cohen, 2010 Once upon a time The Scientific Revolution of the 17th century was an innovative concept that inspired a stimulating narrative of how modern science came into the world Half a century later what we now know as the master narrative serves rather as a strait jacket so often events and contexts just fail to fit in No attempt has been made so far to replace the master narrative H Floris Cohen now comes up with precisely such a replacement Key to his path breaking analysis cum narrative is a vision of the Scientific Revolution as made up of six distinct yet narrowly interconnected revolutionary transformations each of some twenty five to thirty years duration This vision enables him to explain how modern science could come about in Europe rather than in Greece China or the Islamic world It also enables him to explain how half way into the 17th century a vast crisis of legitimacy could arise and in the end be overcome The Scientific Revolution and the Origins of Modern Science John Henry, 2008-06-03 This is a concise but wide ranging account of all aspects of the Scientific Revolution from astronomy to zoology The third edition has been thoroughly updated and some sections revised and extended to take into account the latest scholarship and research and new developments in historiography The Origins of Modern Science Ofer Gal, 2021-02-04 The Origins of Modern Science is the first synthetic account of the history of science from antiquity through the Scientific Revolution in many decades Providing readers of all backgrounds and students of all disciplines with the tools to study science like a historian Ofer Gal covers everything from Pythagorean mathematics to Newton s Principia through Islamic medicine medieval architecture global commerce and magic Richly illustrated throughout scientific reasoning and practices are introduced in accessible and engaging ways with an emphasis on the complex relationships between

institutions beliefs and political structures and practices Readers gain valuable new insights into the role that science plays both in history and in the world today placing the crucial challenges to science and technology of our time within their historical and cultural context

Horizons James Poskett, 2022-03-22 The history of science as it has never been told before a tale of outsiders and unsung heroes from far beyond the Western canon that most of us are taught When we think about the origins of modern science we usually begin in Europe We remember the great minds of Nicolaus Copernicus Isaac Newton Charles Darwin and Albert Einstein But the history of science is not and has never been a uniquely European endeavor Copernicus relied on mathematical techniques that came from Arabic and Persian texts Newton's laws of motion used astronomical observations made in Asia and Africa When Darwin was writing *On the Origin of Species* he consulted a sixteenth century Chinese encyclopedia And when Einstein studied quantum mechanics he was inspired by the Bengali physicist Satyendra Nath Bose *Horizons* is the history of science as it has never been told before uncovering its unsung heroes and revealing that the most important scientific breakthroughs have come from the exchange of ideas from different cultures around the world In this ambitious revelatory history James Poskett recasts the history of science uncovering the vital contributions that

scientists in Africa America Asia and the Pacific have made to this global story *To Explain the World* Steven Weinberg,2015-02-17 The Nobel Prize winner shares a masterful journey through humankind s scientific coming of age from the Greeks to modern times Brian Greene In this rich irreverent and compelling history Nobel Prize winning physicist Steven Weinberg takes us across centuries of human striving to unravel the mysteries of the world This sweeping saga ranges from ancient Miletus to medieval Baghdad and Oxford from Plato s Academy and the Museum of Alexandria to the cathedral school of Chartres and the Royal Society of London Weinberg shows that while the scientists of ancient and medieval times lack our understanding of the world they also lacked the knowledge tools and intellectual framework necessary to go about understand it Yet over the centuries through the struggle to solve such mysteries as the curious backward movement of the planets and the rise and fall of the tides the modern discipline of science eventually emerged An illuminating exploration of the way we consider and analyze the world around us *To Explain the World* is a sweeping ambitious account of how difficult it was to discover the goals and methods of modern science and the impact of this discovery on human knowledge and development *A History of Science* Henry Smith Williams,1910 *The Invention of Science* David Wootton,2015-12-08 This fantastic revisionist history captures the excitement of the scientific revolution and makes a point of celebrating the advances it ushered in Financial Times We live in a world transformed by scientific discovery In *The Invention of Science* historian David Wootton reveals why the Scientific Revolution was truly the greatest event in our history Spanning continents and centuries Wootton chronicles the factors that led to this crucial transformation and the fascinating people who made it happen Wootton argues that the Scientific Revolution was actually five separate yet concurrent events that merged to create a new worldview Here are the brilliant iconoclasts Galileo Copernicus Brahe Newton and many more curious minds from across Europe whose studies of the natural world challenged centuries of religious orthodoxy and ingrained superstition From gunpowder technology the discovery of the new world movable type printing perspective painting and the telescope to the practice of conducting experiments the laws of nature and the concept of the fact Wootton shows how these discoveries codified into a social construct and a system of knowledge Ultimately he makes clear the link between scientific discovery and the rise of industrialization and the birth of the modern world we know *Introduction to the History of Modern Philosophy* Arthur Stone Dewing,1903 **Science and Innovations in Iran** A.
