Optimizing Play Christopher A. Paul, 2024-05-14 An unexpected take on how games work, what the stakes are for them, and how game designers can avoid the traps of optimization. The process of optimization in games seems like a good thing, who wouldn't want to find the most efficient way to play and win? As Christopher Paul argues in *Optimizing Play*, however, optimization can sometimes risk a tragedy of the commons, where actions that are good for individuals jeopardize the overall state of the game for everyone else. As he explains, players inadvertently limit play as they theorycraft, seeking optimal choices. The process of developing a meta, or the most effective tactic available, structures decision making, causing play to stagnate. A stale meta then creates a perception that a game is solved and may lead players to turn away from the game. Drawing on insights from game studies, rhetoric, the history of science, ecology, and game theory literature, Paul explores the problem of optimization in a range of video games, including *Overwatch*, *FIFA*, *EA Sports FC*, *NBA 2K*, *Clash Royale*, *World of Warcraft*, and *League of Legends*. He also pulls extensively from data analytics in sports, where the problem has progressed further and is even more intractable than it is in video games, given the money sports teams invest to find an edge. Finally, Paul offers concrete and specific suggestions for how games can be developed to avoid the trap set by optimization run amok.

Robots That Love Judith A. Markowitz, 2025-10-30 In a world of increasingly sophisticated AI, the relationship between creator and creation has shifted. Robot lovers coexist with humans, and the boundaries of emotion and consciousness are blurred. This book considers the fundamental challenge of imbuing robots with the capacity to experience love, delving into the consequences of loving robots that can only feign reciprocation and philosophical questions about sentience and consciousness. Other forms of artificial lovers are also discussed, ranging from ChatGPT and Samantha from the 2013 film *Her* to a variety of sex dolls, monsters, golems, and romanceable characters in dating simulation games. Such entities encompass an array of sexual and gender identities as well as gender biases involved in creating the perfect artificial companion and developing AI systems. These biases, often perpetuated by deep learning algorithms, underscore the need for critical reflection amid the evolution of AI.
