Wei-Kao Lu, 1975 *Fourth International Symposium on Recycling of Metals and Engineered Materials* Donald L. Stewart, Jr., James C. Daley, Robert L. Stephens, 2013-10-07 This proceedings collection continues the tradition established by earlier TMS Recycling Meetings in this series by presenting fundamental and practical aspects of recycling metals and engineered materials This collection concentrates on fundamental and applied research and industrial practices in the recycling of a wide variety of materials including aluminum scrap recycling aluminum dross processing aluminum by product recovery automotive recycling magnesium EAF dust processing secondary zinc secondary lead secondary copper nickel precious metals recycling refractory recycling and electronics plating 4th International Symposium on High-Temperature Metallurgical Processing Tao Jiang, Jiann-Yang Hwang, Phillip J. Mackey, Onuralp Yucel, Guifeng Zhou, 2013-02-21 In the last decade global metallurgical industries have experienced fast and prosperous growth High temperature metallurgical technology is the backbone to support the technical environmental and economical needs for the growth This symposium provides a stage to introduce the advancements and developments of new high temperature metallurgical technologies and their applications to the areas of processing of minerals extraction of metals preparation of refractory and ceramic materials sintering and synthesis of fine particles treatment and recycling of slag and wastes and saving of energy and protection of environment *Extractive Metallurgy 2* Alain Vignes, 2013-03-01 Extractive metallurgy is the art and science of extracting metals from their ores and refining them The production of metals and alloys from these source materials is still one of the most important and fundamental industries in both developed and developing economies around the world The outputs and products are essential resources for the metallic mechanical electromagnetic electrical and electronics industries silicon is treated as a metal for these purposes This series is devoted to the extraction of metals from ores concentrates enriched ores scraps and other sources and their refining to the state of either liquid metal before casting or to solid metals The extraction and refining operations that are required may be carried out by various metallurgical reaction processes Extractive Metallurgy 1 deals with the fundamentals of thermodynamics and kinetics of the reaction processes Extractive Metallurgy 2 focuses on pyrometallurgical hydrometallurgical halide and electro metallurgical conversion processes Extractive Metallurgy 3 deals with the industrial processing operations technologies and process routes in other words the sequence of steps or operations used to convert the ore to metal Processes and operations are studied using the methodology of chemical reaction engineering As the fundamentals of the art and science of Extractive Metallurgy are infrequently taught as dedicated university or engineering schools courses this series is intended both for students in the fields of Metallurgy and Mechanical Engineering who want to acquire this knowledge and also for engineers put in charge of the operation of an industrial production unit or the development of a new process who will need the basic knowledge of the corresponding technology
