Mathematics of Data Fusion I.R. Goodman, R.P. Mahler, Hung T. Nguyen, 2013-03-14 Data fusion or information fusion are names which have been primarily assigned to military oriented problems In military applications typical data fusion problems are multisensor multitarget detection object identification tracking threat assessment mission assessment and mission planning among many others However it is clear that the basic underlying concepts underlying such fusion procedures can often be used in nonmilitary applications as well The purpose of this book is twofold First to point out present gaps in the way data fusion problems are conceptually treated Second to address this issue by exhibiting mathematical tools which treat combination of evidence in the presence of uncertainty in a more systematic and comprehensive way These techniques are based essentially on two novel ideas relating to probability theory the newly developed fields of random set theory and conditional and relational event algebra This volume is intended to be both an update on research progress on data fusion and an introduction to potentially powerful new techniques fuzzy logic random set theory and conditional and relational event algebra Audience This volume can be used as a reference book for researchers and practitioners in data fusion or expert systems theory or for graduate students as text for a research seminar or graduate level course

Detection, estimation, & Modulation Theory H.L. Van Trees, **Detection Estimation and Modulation Theory, Part I** Harry L. Van Trees, Kristine L. Bell, 2013-04-05 Originally published in 1968 Harry Van Trees's Detection Estimation and Modulation Theory Part I is one of the great time tested classics in the field of signal processing Highly readable and practically organized it is as imperative today for professionals researchers and students in optimum signal processing as it was over thirty years ago The second edition is a thorough revision and expansion almost doubling the size of the first edition and accounting for the new developments thus making it again the most comprehensive and up to date treatment of the subject With a wide range of applications such as radar sonar communications seismology biomedical engineering and radar astronomy among others the important field of detection and estimation has rarely been given such expert treatment as it is here Each chapter includes section summaries realistic examples and a large number of challenging problems that provide excellent study material This volume which is Part I of a set of four volumes is the most important and widely used textbook and professional reference in the field *Signal and Image Processing in Navigational Systems* Vyacheslav Tuzlukov, 2018-10-03 Classical and modern theories have given us a degree of noise immunity by defining the sufficient statistic of the mean of the likelihood function The generalized theory moves beyond these limitations to determine the jointly sufficient statistics of the mean and variance of the likelihood function *Signal and Image Processing in Navigational Systems* introduces us to the generalized approach and then delves rigorously into the theory and practical applications of this approach This volume represents the most in depth discussion of the generalized approach to date providing many examples and computer models to demonstrate how this approach raises the upper limits of noise immunity for navigation systems leading to better detection performances This book is vital for signal and image processing experts radar communications acoustics and navigational systems designers as well as professionals in the fields of statistical pattern recognition biomedicine astronomy and robotics who wish to extend the boundaries of noise immunity and improve qualitative performance of their systems *Fuzzy Set and Possibility Theory* Ronald R. Yager, 1982 *Detection, Estimation, and Linear Modulation Theory* Harry L. Van Trees, 1968 *Selected Papers on Sensor and Data Fusion* Firooz A. Sadjadi, 1996 This text presents papers covering issues in the field of sensor and data fusion Topics include classifier integration with multiple sensors combining uncertain messages using belief functions decentralized sequential detection and fusion propagation and structuring belief networks **Detection, Estimation, and Modulation Theory, Part I** Harry L. Van Trees, 2001 Highly readable paperback reprint of one of the great time tested classics in the field of signal processing Together with the reprint of Part III and the new Part IV this will be the most complete treatment of the subject available As imperative today as it was when it originally published Has important applications in radar sonar communications seismology biomedical engineering and astronomy Includes section summaries examples and a large number of problems **A Collection of Technical Papers**, 1976 **Detection, Estimation and Modulation Theory.
