Starlight J. B. Hearnshaw, 1990-04-19 This book presents a detailed pedagogical account of the equation of state and its
applications in several important and fast growing topics in theoretical physics chemistry and engineering This book is the
story of the analysis of starlight by astronomical spectroscopy It describes the development of the subject from the time of
Joseph Fraunhofer who in 1814 used a telescope mounted prism to observe the spectral light emitted from several bright
stars He discovered that light was missing at certain colours wavelengths in the starlight and these so called spectral lines
were subsequently shown to hold clues to the nature of the stars themselves The book explains how the classification of stars
using their line spectra developed into a major branch of astronomy whilst new methods in astrophysics made possible the
approximate quantitative analysis of spectral lines in the 1920s and 1930s After the Second World War these techniques
were considerably improved when computers were programmed to model the structure of the outer layers of stars Basic
concepts in spectroscopy and spectral analysis are also covered and finally Dr Hearnshaw comments on the stellar
spectroscopy of some individual star **The Analysis of Starlight** John B. Hearnshaw, 2014-03-17 First published in 1986
this is the story of the analysis of starlight by astronomical spectroscopy Beginning with Joseph Fraunhofer's discovery of
spectral lines in the early nineteenth century this new edition continues the story through to the year 2000 In addition to the
key discoveries it presents the cultural and social history of stellar astrophysics by introducing the leading astronomers and
their struggles triumphs and disagreements Basic concepts in spectroscopy and spectral analysis are included so both

observational and theoretical aspects are described in a non mathematical framework This new edition covers the final decades of the twentieth century with its major advances in stellar astrophysics the discovery of extrasolar planets new classes of stars and the observation of the ultraviolet spectra of stars from satellites The in depth coverage makes it essential reading for graduate students working in stellar spectroscopy professional and amateur astronomers and historians of science
