 common with general scientific investigation new ideas and implementations emerge quite spontaneously and these are
 discussed used discarded or subsumed at conferences in the reference journals as well as through the Internet After a little
 more maturity has been acquired by the new concepts then archival publication as a scientific or engineering monograph
 may occur The goal of the Springer Tracts in Advanced Robotics is to publish new developments and advances in the fields of
 robotics research rapidly and informally but with a high quality It is hoped that prospective authors will welcome the
 opportunity to publish a structured presentation of some of the emerging robotics methodologies and technologies The edited
 volume by Fabrizio Caccavale and Luigi Villani concerns with a wide subject of modern engineering namely mechatronics
 This new discipline has lately been receiving an increasing deal of attention for its unique connotation to represent a blend of
 mechanical electronic and information technologies In such a scenario the importance of providing the supervisory control
 system with fault detection and fault identification capabilities becomes crucial to the effective development of mechatronic
 systems
