The Real Environmental Crisis Jack Hollander, 2003-04-02 Drawing a completely new road map toward a sustainable future Jack M Hollander contends that our most critical environmental problem is global poverty His balanced authoritative and lucid book challenges widely held beliefs that economic development and affluence pose a major threat to

the world's environment and resources. Pointing to the great strides that have been made toward improving and protecting the environment in the affluent democracies, Hollander makes the case that the essential prerequisite for sustainability is a global transition from poverty to affluence coupled with a transition to freedom and democracy. *The Real Environmental Crisis* takes a close look at the major environment and resource issues: population growth, climate change, agriculture and food supply, our fisheries, forests and fossil fuels, water and air quality and solar and nuclear power. In each case, Hollander finds compelling evidence that economic development and technological advances can relieve such problems as food shortages, deforestation, air pollution and land degradation and provide clean water, adequate energy supplies and improved public health. The book also tackles issues such as global warming, genetically modified foods, automobile and transportation technologies and the highly significant Endangered Species Act, which Hollander asserts never would have been legislated in a poor country whose citizens struggle just to survive. Hollander asks us to look beyond the media's doomsday rhetoric about the state of the environment for much of it is simply not true and to commit much more of our resources where they will do the most good to lifting the world's population out of poverty.

The Globalization of Environmental Crisis Jan Oosthoek, Barry K. Gills, 2013-10-31. Previously published as a special issue of *Globalizations*, this collection of essays addresses what is arguably the most pressing and urgent issue of our day: the continuing development of global environmental crises and the need for new and urgent responses to them by the world community. The contributors include social scientists, environmental historians, anthropologists and science policy researchers and together they give an overview of the history of the globalization of environmental crisis over the past several decades, both in terms of the science of measurement and the types of policy and public responses that have emerged to date. The specific issue areas addressed in the book cover a wide range of topics including international environmental governance, North-South inequalities, climate change, global warming, tropical forests, air pollution, economic and paradigm shifts, sustainability, indigenous peoples and eco-conservation, EU environmental policy, the United States and politicized climate science and more. *The Globalization of Environmental Crisis* will be of particular interest to all those concerned with the on-going debate over the state of the global environment and what to do about it.
