This thesis develops an approach to the construction of multidimensional stochastic models for intelligent systems exploring an underwater environment The important characteristics shared by such applications are real time constraints unstructured three dimensional terrain high bandwidth sensors providing redundant overlapping coverage lack of prior knowledge about the environment and inherent inaccuracy or ambiguity in sensing and interpretation The models are cast as a three dimensional spatial decomposition of stochastic multisensor feature vectors that describe an underwater environment Such models serve as intermediate descriptions that decouple low level high bandwidth sensing from the higher level more asynchronous processes that extract information A numerical approach to incorporating new sensor information stochastic backprojection is derived from an incremental adaptation of the summation method for image reconstruction Error and ambiguity are accounted for by blurring a spatial projection of remote sensor data before combining it stochastically with the model By exploiting the redundancy in high bandwidth sensing model certainty and resolution are enhanced as more data accumulate In the case of three dimensional profiling the model converges to a fuzzy surface distribution from which a deterministic surface map is extracted Computer simulations demonstrate the properties of stochastic backprojection and stochastic models Other simulations show that the stochastic model can be used directly for terrain relative navigation The method is applied to real sonar data sets from multibeam bathymetric surveying Sea Beam towed sidescan bathymetry Sea MARC II towed sidescan acoustic imagery Sea MARC I II and high resolution scanning sonar aboard a remotely operated vehicle A multisensor application combines Sea Beam bathymetry and Sea MARC I intensity models Targeted real time applications include shipboard mapping and survey a piloting aid for remotely operated vehicles and manned submersibles and world modeling for autonomous vehicles **Insight** ,1994 Dr. Dobb's Journal of Software Tools for the Professional Programmer ,1987 *Translations from the Scientific Literature* SFCSI Program (U.S.),1974 **Special Foreign Currency Science Information Program** National Science Foundation (U.S.),1960 *Dr. Dobb's Journal* ,1993
