The Smart Enough City Ben Green, 2020-02-18 Why technology is not an end in itself and how cities can be smart enough using technology to promote democracy and equity Smart cities where technology is used to solve every problem are hailed as futuristic urban utopias We are promised that apps algorithms and artificial intelligence will relieve congestion restore democracy prevent crime and improve public services In *The Smart Enough City* Ben Green warns against seeing the city only through the lens of technology taking an exclusively technical view of urban life will lead to cities that appear smart but under the surface are rife with injustice and inequality He proposes instead that cities strive to be smart enough to embrace technology as a powerful tool when used in conjunction with other forms of social change but not to value technology as an end in itself In a technology centric smart city self driving cars have the run of downtown and force out pedestrians civic engagement is limited to requesting services through an app police use algorithms to justify and perpetuate racist practices and governments and private companies surveil public space to control behavior Green describes smart city efforts gone wrong but also smart enough alternatives attainable with the help of technology but not reducible to technology a livable city a democratic city a just city a responsible city and an innovative city By recognizing the complexity of urban life rather than merely seeing the city as something to optimize these Smart Enough Cities successfully incorporate technology into a holistic vision of justice and equity
