ChatrEx Anjali Khurana, 2021 When breakdowns occur during a human chatbot conversation the lack of transparency and the black box nature of task oriented chatbots can make it difficult for end users to understand what went wrong and why Inspired by recent HCI research on explainable AI solutions we explored the design

space of explainable chatbot interfaces through ChatrEx We followed the iterative design and prototyping approach and designed two novel in application chatbot interfaces ChatrEx VINC and ChatrEx VST that provide visual example based step by step explanations about the underlying working of a chatbot during a breakdown ChatrEx VINC provides visual example based step by step explanations in context of the chat window whereas ChatrEx VST provides explanations as a visual tour overlaid on the application interface Our formative study with 11 participants elicited informal user feedback to help us iterate on our design ideas at each of the design and ideation phases and we implemented our final designs as web based interactive chatbots for complex spreadsheet tasks We conducted an observational study with 14 participants to compare our designs with current state of the art chatbot interfaces and assessed their strengths and weaknesses We found that visual explanations in both ChatrEx VINC and ChatrEx VST enhanced users understanding of the reasons for a conversational breakdown and improved users perceptions of usefulness transparency and trust We identify several opportunities for future HCI research to exploit explainable chatbot interfaces and better support human chatbot interaction
