Mind-Reading and Artificial Intelligence: Past, Present and Future Prof. (Dr.) Jai Paul Dudeja, 2024-10-30 Mind reading typically refers to the ability of discerning or interpreting someone else's thoughts, feelings, or intentions. Mind Reading has two components: human-based and ii device-based artificial intelligence. Artificial Intelligence (AI) refers to programming computers to do tasks that normally require human intelligence, like learning, problem-solving, and understanding language. It is like giving computers the ability to think and make decisions on their own, similar to how humans do. AI helps machines learn from data, adapt to new situations, and perform tasks without being explicitly programmed for each step. This book covers the topics on human-based and device-based mind reading and interpretation of artificial intelligence, which is divided into 32 chapters and the following 8 sections: i Mind Reading and Artificial Intelligence Introduction and Overview ii Human-Based Mind Reading iii Artificial Intelligence Introduction Types of Learning iv Device-Based Mind Reading And Virtual Assistants v Applications and Opportunities of Artificial Intelligence vi Artificial Intelligence Ethical Issues Risks and Regulations vii Artificial Consciousness and viii Artificial Intelligence in India Status and the Way Forward

AI 2003: Advances in Artificial Intelligence Tamas D. Gedeon, Lance C.C. Fung, 2003-12-01 Consider the problem of a robot algorithm learning mechanism moving along the real line, attempting to locate a particular point. To assist the mechanism, we assume that it can communicate with an Environment Oracle, which guides it with information regarding the direction in which it should go. If the Environment is deterministic, the problem is the Deterministic Point Location Problem, which has been studied rather thoroughly. 1 In its pioneering version, 1 the problem was presented in the setting that the Environment could charge the robot a cost, which was proportional to the distance it was from the point sought for. The question of having multiple communicating robots locate a point on the line has also been studied. 1 2 In the stochastic version of this problem, we consider the scenario when the learning mechanism attempts to locate a point in an interval with stochastic, i.e., possibly erroneous, instead of deterministic responses from the environment.

Thus when it should really be moving to the right it may be advised to move to the left and vice versa Apart from the problem being of importance in its own right the stochastic pointlocationproblemalsohas potentialapplications insolvingoptimization problems Inmanyoptimizationsolutions forexampleinimageprocessing pattern recognition and neural computing 5 9 11 12 14 16 19 the algorithm worksits wayfromits currentsolutionto the optimal solutionbasedoninformation that it currentlyhas A crucialquestionis oneof determining the parameter whichtheoptimizationalgorithms shoulduse
