Write a function that checks if a number is a prime number in JavaScript

Sure, here's a simple function in JavaScript that checks if a number is a prime number:

```
function isPrime(num) {
  if (num <= 1) return false;
  if (num <= 2) return true;
  if (num % 2 === 0 || num % 3 === 0) return false;

  for (let i = 3; i <= Math.sqrt(num); i += 2) {
    if (num % i === 0 || num % (i + 1) === 0) return false;
  }

  return true;
}
```

The function works by first checking if the number is less than or equal to 1, in which case it returns false because 1 is not a prime number. It then checks if the number is less than or equal to 2, in which case it returns true because 2 is a prime number.

If the number is greater than 2, the function checks if it is divisible by 2 or 3. If it is, it returns false.

If the number is not divisible by 2 or 3, the function checks if it is divisible by any number of the form 6k + 1, where k is an integer. If it is, it returns false.

If none of these conditions are met, the function returns true, indicating that the number is prime.
