The International Responsibility of States for AI-enabled Space Activities Stefan-Michael Wedenig,2025-12-22 Artificial Intelligence AI has permeated our every day lives What once was solely a human task has now been taken over by AI May it be credit card approvals customer support financial transactions medical imaging or software development there is AI working behind the scenes Outer space historically always amongst the most developed domains has not remained untouched for long and space

applications have started to increasingly rely on AI. However, this increase in use also leads to a myriad of legal issues, particularly the issue of responsibility and liability under Article VI and Article VII of the Outer Space Treaty and the Liability Convention. Our legal norms, whether they be domestic or international in nature, are ultimately built around human behaviour, and when applied to AI might not function. Should damage caused by an AI-enabled space object arise, it proves difficult to assess the responsibility of the appropriate State party under Article VI of the Outer Space Treaty or the liability of the launching State. While legal literature is primarily concerned with domestic legal issues arising from the use of AI, an in-depth analysis concerning State responsibility and liability for AI-enabled space activities is absent. Space legal literature strongly favours a view advocating for the creation of new hard law in form of new binding legal instruments or the amendment of existing law. Suggestions *de lege ferenda* are often relied on by authors. Given the inherent difficulty in creating new law or amending existing legal instruments, this book proposes to look towards the *lex lata* and argues that the existing legal norms of State responsibility, State liability, and treaty law are sufficient to govern the responsibility of States for their AI-enabled space activities. The present research looks at these issues from a public international law perspective and proposes a solution within the *lex lata*. **Proceedings AAAI ... National Conference on Artificial Intelligence**, 2005 **Only**

Humans Need Apply Thomas H. Davenport, Julia Kirby, 2016-05-24. An invigorating thought-provoking and positive look at the rise of automation that explores how professionals across industries can find sustainable careers in the near future. Nearly half of all working Americans could risk losing their jobs because of technology. It's not only blue-collar jobs at stake. Millions of educated knowledge workers, writers, paralegals, assistants, medical technicians are threatened by accelerating advances in artificial intelligence. The industrial revolution shifted workers from farms to factories. In the first era of automation, machines relieved humans of manually exhausting work. Today, Era Two of automation continues to wash across the entire services-based economy that has replaced jobs in agriculture and manufacturing. Era Three and the rise of AI is dawning. Smart computers are demonstrating they are capable of making better decisions than humans. Brilliant technologies can now decide, learn, predict, and even comprehend much faster and more accurately than the human brain, and their progress is accelerating. Where will this leave lawyers, nurses, teachers, and editors? In **Only Humans Need Apply**, Thomas Hayes Davenport and Julia Kirby reframe the conversation about automation, arguing that the future of increased productivity and business success isn't either human or machine. It's both. The key is augmentation: utilizing technology to help humans work better, smarter, and faster. Instead of viewing these machines as competitive interlopers, we can see them as partners and collaborators in creative problem-solving as we move into the next era. The choice is ours.
