The PMM's Prompt Playbook

David E. Sweenor, 2025-02-18 Product marketers face mounting pressure to deliver more content, campaigns, and insights with limited time and resources. Unfortunately, most are using elementary prompts and struggle to incorporate generative AI into their daily workflows in ways that save time and drive impact. As a marketing leader with 20 years in data and analytics, I've tested hundreds of AI workflows and have identified what actually works for B2B product marketing. The PMM's Prompt Playbook: Mastering Generative AI for B2B Marketing Success distills that experience into practical workflows that help you better understand customer needs, build rich personas, analyze competitors, enable sales teams, and plan product launches. There are no theoretical discussions about AI potential; just proven, prompt-driven workflows that cut research time, accelerate content creation, and improve marketing outcomes. Each chapter walks through specific workflows that are refined through real-world applications. You'll learn how to extract insights from customer feedback, create targeted content for different buyer personas, build compelling product narratives, and accelerate launch planning. This is a practical guide for working smarter. Want to analyze a competitor's positioning in minutes instead of hours? Need to generate targeted content for five different personas? Looking to speed up launch planning without sacrificing quality? The workflows in this playbook show you how. Written for busy product marketers who need proven solutions, this guide helps you deliver quick wins that drive real business impact. Every prompt and process has been tested and refined through hands-on experience in B2B technology marketing. Remember, it's not the tech that's tiny; just the book.

A Practical Guide to Survey Questionnaire

Design and Evaluation Emilia Peytcheva, Ting Yan, 2025-04-01 A Practical Guide to Survey Questionnaire Design and Evaluation summarizes principles, guidelines, and best practices for developing and testing survey questionnaires, driven and supported by theoretical and empirical research. It provides a broad overview of literature on questionnaire design, drawing on both theoretical and empirical research. This book consists of three parts. The first covers the survey response process model, which will serve as the theoretical framework to establish the basic principles of writing different types of survey questions: attitudinal, behavioral, demographic, and knowledge. The second part of this book focuses on special topics such as sensitive questions, developing questionnaires for older adults and children, designing a paper survey, designing a web survey, and optimizing for a mobile device. Developing questionnaires for a multimode survey and conducting surveys in multiple languages and cultures. The third part of this book describes methods for testing and evaluating survey questions. Topics cover focus groups, cognitive interviewing, expert review, Questionnaire Appraisal System, behavior coding, respondent and interviewer debriefing, randomized experiments, and pilot studies. Given extensive web survey coverage, we also discuss usability testing of web surveys. Finally, we present a brief overview of the use of artificial intelligence and machine learning.
