Artificial Intelligence The somewhat ill defined long term aim of AI is to build machines that are conscious self aware and sentient machines capable of the kind of intelligent autonomous action that currently only people are capable of As an AI researcher with 25 years of experience professor Mike Wooldridge has learned to be obsessively cautious about such claims

while still promoting an intense optimism about the future of the field There have been genuine scientific breakthroughs that have made AI systems possible in the past decade that the founders of the field would have hailed as miraculous Driverless cars and automated translation tools are just two examples of AI technologies that have become a practical everyday reality in the past few years and which will have a huge impact on our world While the dream of conscious machines remains Professor Wooldridge believes a distant prospect the floodgates for AI have opened Wooldridge's A Brief History of Artificial Intelligence is an exciting romp through the history of this groundbreaking field a one stop shop for AI's past present and world changing future **Another Way** Dave Whorton, 2025-05-06 From the inner sanctum of Silicon Valley and short term capitalism comes the story of a VC who lived it then left it and found a better way to build great companies Dave Whorton was John Doerr's associate partner at high flying Kleiner Perkins Caufield a way in which leaders were committed to a purpose beyond personal wealth generation to putting their people first and to setting up their companies to endure He calls these companies Evergreen Another Way combines Whorton's inspiring story with his Evergreen 7Ps framework designed to guide more entrepreneurs and business leaders to follow his path Full of revelations practical advice and real world examples of companies going Evergreen Another Way is as instructive as it is inspiring at showing capitalism at its best AI, 2005
