Setting things up **The Risk Perception of Artificial Intelligence** Hugo Neri, 2020-12-16 In *The Risk Perception of Artificial Intelligence* Hugo Neri examines how society has come to understand artificial intelligence by studying how cultural productions, intellectuals, and the media have shaped society's views, understandings, and fears of artificial intelligence. As an abstract term, artificial intelligence has been understood both as a discipline and a robot's mind. In the twenty-first century, cultural representations in comics, television shows, and movies converged with public lectures about the risks of AI by prominent public figures such as Stephen Hawking and Elon Musk. Neri analyzes how this cultural and intellectual miscellany shapes the way we perceive artificial intelligence and whether this perception is universal or restricted to the Western world.

Smart Systems Design, Applications, and Challenges Rodrigues, João M.F., Cardoso, Pedro J.S., Monteiro, Jânio, Ramos, Célia M.Q., 2020-02-28 Smart systems when connected to artificial intelligence (AI) are still closely associated with some popular misconceptions that cause the general public to either have unrealistic fears about AI or to expect too much about how it will change our workplace and life in general. It is important to show that such fears are unfounded and that new trends, technologies, and smart systems will be able to improve the way we live, benefiting society without replacing humans in their core activities. *Smart Systems Design, Applications, and Challenges* provides emerging research that presents the state of the art technologies and available systems in the domains of smart systems and AI and explains solutions from an augmented intelligence perspective, showing that these technologies can be used to benefit instead of replace humans by augmenting the information and actions of their daily lives. The book addresses all smart systems that incorporate functions of sensing, actuation, and control in order to describe and analyze a situation and make decisions based on the available data in a predictive or adaptive manner. Highlighting a broad range of topics such as business intelligence, cloud computing, and autonomous vehicles, this book is ideally designed for engineers, investigators, IT professionals, researchers, developers, data analysts, professors, and students.
