Depositional Models of Shelf and Shoreline Sandstones Thomas F. Moslow, 1984 Depositional Models of Shelf and Shoreline Sandstones Thomas F. Moslow, 1984 This lecture course is designed to provide geologic insights towards the development of depositional and exploration models for sandstone reservoirs associated with one or more of a variety of shelf and shoreline environmental settings Sedimentologic and stratigraphic criteria are used to predict more accurately the subsurface distribution and trend of reservoir quality sandstones Equally important in the development of models for shelf and shoreline sandstones is the subsurface analysis of modern depositional systems Recent Advances in Models of Siliciclastic Shallow-marine Stratigraphy Gary J. Hampson, 2008 Siliciclastic shallow marine deposits record the interface between land and sea and its response to a variety of forcing mechanisms physical process regime the internal dynamics of coastal and shelfal depositional systems relative sea level sediment flux tectonic setting and climate These deposits have long been the subject of conceptual stratigraphic models that seek to explain the interplay between these various forcing mechanisms and their preservation in the stratigraphic record This volume arose from an SEPM research conference on shoreline shelf stratigraphy that was held in Grand Junction Colorado on August 24 28 2004 The aim of the resulting volume is to highlight the development over the last 15 years of the stratigraphic concepts and models that are used to interpret siliciclastic marginal marine shallow marine and shelf deposits Field Guide for Shelf and Shoreline Sandstones, Cretaceous Haystack Mountains Formation (Shannon Equivalent), Wyoming Roderick W. Moslow, 1984 **Principles of Sedimentology and Stratigraphy Sam** Boggs, 1987 **Sedimentary Environments** Harold G. Reading, 2009-07-15 Sedimentary Environments is one of the most distinguished and influential textbooks in the earth sciences published in the last 20 years. The first and second editions both won universal praise and became classic works in sedimentology Since the publication of the last edition the study of sedimentary environments and facies has made great strides with major advances in facies modelling sequence stratigraphy and basin modelling The 3rd edition of this classic text will likely set the benchmark even higher and needless to say will continue being the textbook of choice for sedimentology students The latest edition of a classic text Incorporates all the latest advances in dynamic stratigraphy Will remain the textbook of choice for upper level undergraduate and graduate students in sedimentology Outcrop Characterization of Sandstone Heterogeneity in Carboniferous Reservoirs, Black
