Adolescent Depression. Definition, Causes, Treatments. Gary Elliott, 2014-06-24 Seminar paper from the year 2010 in the subject Psychology Diagnostics Atlantic International University language English abstract As adults when we think back to our childhood many of us remember this period in our lives as a happy time free from the stresses and worries that accompany adulthood. The reality of the matter is that many children do experience stress and anxiety similar to that of adults and this can and often does result in children and adolescents in particular experiencing mild to severe depression. According to Ghera 2009, depression is one of the most common issues that adolescents deal with and it affects teenagers regardless of their race, ethnicity, gender, or socioeconomic status. It is quite normal for people's mood to change during the course of a day and many experience mood changes from hour to hour, but when those moods become completely overwhelming and all-consuming or fluctuate wildly, they may be indicative of some kind of mood disorder. McIntosh Berk 2000. During the course of this paper, I will focus on defining teenage depression, isolating the causes and predictive factors in conjunction with certain risk factors. Anxiety as a correlate of depression will be highlighted and two of the more common manifestations of depression, dysthymia and bipolar disorder, will be outlined. Coexisting issues and the course of treatment will be addressed, ending with insight into suicide in adolescents. The point of departure needs to be a working concept of depression as it pertains to adolescents.

Definition Adolescence is defined as the period of development marked at the beginning by the onset of puberty and at the end by the attainment of physiological or psychological maturity. In Reber 2. In Psychiatry.
