Gero,Fay Sudweeks,2012-12-06 The development of computational models of design founded on the artificial intelligenceparadigm has provided an impetus for muchofcurrentdesign research As artificial intelligence has matured and developed new approaches so the impact ofthese new approaches on design research has been felt This can be seen in the wayconcepts from cognitive science has found theirway into artificial intelligence and hence into design research And also in the way in which agent based systems arebeingincorporated into design systems In design research there is an increasing blurring between notions drawn from artificial intelligence and those drawn from cognitive science Whereas a number of years ago the focus was largely on applying artificial intelligence to designing as an activity thus treating designing as a form ofproblem solving today we are seeing a much wider variety ofconceptions of the role of artificial intelligence in helping to model and comprehend designing as a process Thus we see papers in this volume which have as their focus the development or implementationofframeworks for artificial intelligence in design attempting to determine a unique locus for these ideas We see papers which attempt to find foundations for the development of tools based on the artificial intelligence paradigm often the foundations come from cognitive studiesofhuman designers      **United States of America V.
