

DERIVED ℓ -ADIC CATEGORIES FOR ALGEBRAIC STACKS

KAI A. BEHREND

ABSTRACT. We construct an ℓ -adic formalism of derived categories for algebraic stacks. Over finite fields we generalize the theory of mixed complexes to a theory of so called *convergent complexes*. This leads to a proof of the Lefschetz Trace Formula for the Frobenius.

Tannaka Krein reconstruction we associate to the category of admissible representations of the category $\mathcal{O}$ of a Kac Moody algebra and its category of admissible duals a monoid with a coordinate ring The Kac Moody group is the Zariski open dense unit group of this monoid The restriction of the coordinate ring to the Kac Moody group is the algebra of strongly regular functions introduced by V Kac and D Peterson This monoid has similar structural properties as a reductive algebraic monoid In particular it is unit regular its idempotents related to the faces of the Tits cone It has Bruhat and Birkhoff decompositions The Kac Moody algebra is isomorphic to the Lie algebra of this monoid

On L-adic Cohomology of Artin Stacks Shenghao Sun, 2010 We develop the notion of stratifiability in the context of derived categories and the six operations for stacks in the work of Laszlo and Olsson Then we reprove Behrend's Lefschetz trace formula for stacks and give the meromorphic continuation of the L series of stacks defined over a finite field We give an upper bound for the weights of the cohomology groups of stacks and as an application prove the decomposition theorem for perverse sheaves on stacks with affine diagonal both over finite fields and over the complex numbers Along the way we generalize the structure theorem of mixed sheaves and the generic base change theorem for stacks We also give a short exposition on the lisse analytic topoi of complex analytic stacks and give a comparison between the lisse étale topoi of a

complex algebraic stack and the lisse analytic topos of its analytification

Algebraic Spaces and Stacks Martin Olsson, 2023-09-15 This book is an introduction to the theory of algebraic spaces and stacks intended for graduate students and researchers familiar with algebraic geometry at the level of a first year graduate course The first several chapters are devoted to background material including chapters on Grothendieck topologies descent and fibered categories Following this the theory of algebraic spaces and stacks is developed The last three chapters discuss more advanced topics including the Keel Mori theorem on the existence of coarse moduli spaces gerbes and Brauer groups and various moduli stacks of curves Numerous exercises are included in each chapter ranging from routine verifications to more difficult problems and a glossary of necessary category theory is included as an appendix It is splendid to have a self contained treatment of stacks written by a leading practitioner Finally we have a reference where one can find careful statements and proofs of many of the foundational facts in this important subject Researchers and students at all levels will be grateful to Olsson for writing this book William Fulton University of Michigan This is a carefully planned out book starting with foundations and ending with detailed proofs of key results in the theory of algebraic stacks Johan de Jong Columbia University [\$p\$ -Adic Hodge Theory for Artin Stacks](#) Dmitry Kubrak, Artem Prikhodko, 2025-01-23 View the abstract

Perverse Sheaves and Applications to Representation Theory Pramod N. Achar, 2021-09-27 Since its inception around 1980 the theory of perverse sheaves has been a vital tool of fundamental importance in geometric representation theory This book which aims to make this theory accessible to students and researchers is divided into two parts The first six chapters give a comprehensive account of constructible and perverse sheaves on complex algebraic varieties including such topics as Artin's vanishing theorem smooth descent and the nearby cycles functor This part of the book also has a chapter on the equivariant derived category and brief surveys of side topics including tale and adic sheaves D modules and algebraic stacks The last four chapters of the book show how to put this machinery to work in the context of selected topics in geometric representation theory Kazhdan Lusztig theory Springer theory the geometric Satake equivalence and canonical bases for quantum groups Recent developments such as the p canonical basis are also discussed The book has more than 250 exercises many of which focus on explicit calculations with concrete examples It also features a 4 page Quick Reference that summarizes the most commonly used facts for computations similar to a table of integrals in a calculus textbook
