Hoefsmit, 1993 *Dendritic Cells in Fundamental and Clinical Immunology* Paola Ricciardi-Castagnoli, 2013-11-11 These proceedings contain selected contributions from the participants to the Fourth International Symposium on Dendritic cells that was held in Venice Lido Italy from October 5 to 10 1996 The symposium was attended by more than 500 scientists coming from 24 different countries Studies on dendritic cells DC have been greatly hampered by the difficulties in preparing sufficient cell numbers and in a reasonable pure form At this meeting it has been shown that large quantities of DC can be generated from precursors in both mice and humans and this possibility has enormously encouraged studies aimed to characterize DC physiology and DC specific genes and to employ DC therapeutically as adjuvants for immunization The possibility of generating large numbers of autologous DC that can be used in the manipulation of the immune response against cancer and infectious diseases has tremendously boosted dendritic cell research and the role of DC in a number of medical areas has been heatedly discussed Dendritic Cells in Fundamental and Clinical Immunology Jacques Banchereau, Daniel Schmitt, 2012-12-06 These Proceedings contain the contributions of the participants of the Third International Symposium on Dendritic Cells that was held in Annecy France from June 19 to June 24 1994 This symposium represented a follow up of the first and second international symposia that were held in Japan in 1990 and in the Netherlands in 1992 Dendritic cells are antigen presenting cells and are found in all tissues and organs of the body They can be classified into 1 interstitial dendritic cells of the heart kidney gut and lung 2 Langerhans cells in the skin and mucous membranes 3 interdigitating dendritic cells in the thymic medulla and secondary lymphoid tissue and 4 blood dendritic cells and lymph dendritic cells veiled cells Although dendritic cells in each of these compartments are all CD45 leukocytes that arise from the bone marrow they may exhibit differences that relate to maturation state and microenvironment Dendritic cells are specialized antigen presenting cells for T lymphocytes they process and present antigens efficiently in situ and stimulate responses from naive and memory T cells in the paracortical area of secondary lymphoid organs Recent evidence also demonstrates their role in induction of tolerance By contrast the primary and secondary B cell follicles contain follicular dendritic cells that trap and retain intact antigen as immune complexes for long periods of time The origin of follicular dendritic cells is not clear but most investigators believe that these cells are not leukocytes Dendritic Cells in Fundamental and Clinical Immunology Paola Ricciardi-Castagnoli, 2014-01-15 *Dendritic Cells in Fundamental and Clinical Immunology* Eduard W. **Approaches Through Basic Science** Jürg P. Seiler, Eugenio Vilanova, 2012-12-06 Ultraviolet radiation a component of sunlight has been recognized by photobiologists dermatologists and oculists as a potential hazard for human health because of its genotoxic carcinogenic and immunotoxic properties Its effects on human health include the induction of skin cancers ocular damage and impairment of immunity to certain infections A few decennia ago it was demonstrated that UV photons can affect the activity of the immune system through interactions with the skin This means that UV not only changes normal cells into cancer cells but also permits the outgrowth of the UV transformed cells by depressing the immune system An intriguing question is what interactions between UV radiation and the skin initiates alterations in immune function in the exposed skin and systemically i.e. in other places than the exposed skin During the last 20 years many studies have been performed in order to investigate the immunosuppressive activities of UVB in laboratory animals and in human volunteers In particular effects of UVB radiation on resistance to tumours and skin associated infections have been examined In addition effects of UVB radiation on immune parameters such as contact hypersensitivity and delayed type hypersensitivity both type IV hypersensitivity reactions mixed lymphocyte reactions mixed skin lymphocyte reactions antigen presentation and numbers and function of Langerhans cells have been studied intensively The antigenicity of murine tumours which are caused by UVB radiation was one of the first items to be investigated Kripke 1974 **5th International Symposium on Dendritic Cells**
