images that are a personal repetition of what has been one of the greatest and most persistent concerns of mankind Even

restricting time to the past decade or so and approaching only the biomedical sciences one still encounters a flood of

information in this relatively young research area Theories and ideas abound as though each researcher provides one of his

own This might well be expected aging is an exceedingly complicated series of crossroads involving trails and even superhighways Each specialist has a peephole society body organ tissue cell or especially in modern biology cellular organelles macromolecules and even molecules and the views of the crossroads are obviously different Hence the number of observations just about equals the number of independent ideas put forward It is natural to seek from highly specialized knowledge a fundamental understanding of aging through the modern research trends in biology that focus on events at the cellular subcellular macromolecular and molecular levels The ultimate clues must lie there with one serious complication There are numerous cell types in any body and each cell type is a very complex machine of its own Additionally there are potential repercussions in that different cells tissues and even molecules have effects on one another This is indeed a confusing situation and one for which we must seek reliable answers provided that we can take a step back and provide a generalized view
