   Architecting Dependable Systems VII Antonio Casimiro,Rogério de Lemos,Cristina Gacek,2010-11-18 As software systems become increasingly ubiquitous issues of dependability become ever more crucial Given that solutions to these issues must be considered from the very beginning of the design process it is clear that dependability and security have to be addressed at the architectural level This book as well as its six predecessors was born of an effort to bring together the research communities of software architectures dependability and security This state of the art survey contains expanded peer reviewed papers based on selected contributions from the Workshop on Architecting Dependable Systems WADS 2009 held at the International Conference on Dependable Systems and Networks DSN 2009 as well as a number of invited papers written by renowned experts in the area The 13 papers are organized in topical sections on mobile and ubiquitous systems architecting systems fault management and experience and vision   *Contemporary Complex Systems and Their Dependability* Wojciech Zamojski,Jacek Mazurkiewicz,Jarosław Sugier,Tomasz Walkowiak,Janusz Kacprzyk,2018-05-26 This book presents the proceedings of the Thirteenth International Conference on Dependability and Complex Systems DepCoS RELCOMEX which took place in the Brun w Palace in Poland from 2nd to 6th July 2018 The conference has been organized at the Faculty of Electronics Wroc aw University of Science and Technology since 2006 and it continues the tradition of two other events RELCOMEX 1977 89 and Microcomputer School 1985 95 The selection of papers in these proceedings illustrates the broad variety of topics that are investigated in dependability analyses of today s complex systems Dependability came naturally as a contemporary answer to new challenges in the reliability evaluation of these systems Such systems cannot be considered only as structures however complex and distributed built on the basis of technical resources hardware their analysis must take into account a unique blend of interacting people their needs and behaviours networks together with mobile properties cloud based systems and a large number of users dispersed geographically and producing an unimaginable number of applications working online A growing number of research methods apply the latest advances in artificial intelligence AI and computational intelligence CI Today s complex systems are really complex and are applied in numerous different fields of contemporary life   **Theory and Engineering of Complex Systems and Dependability** Wojciech Zamojski,Jacek Mazurkiewicz,Jarosław Sugier,Tomasz Walkowiak,Janusz Kacprzyk,2015-06-14 Building upon a long tradition of scientifi c conferences dealing with problems of reliability in technical systems in 2006 Department of Computer Engineering at Wroc aw University of Technology established DepCoS RELCOMEX series of events in order to promote a comprehensive approach to evaluation of system performability which is now commonly called dependability Contemporary complex systems integrate variety of technical information soft ware and human users administrators and management resources Their complexity comes not only from involved technical and organizational structures but mainly from complexity of information processes that must be implemented in specific operational environment data processing monitoring

management etc In such a case traditional methods of reliability evaluation focused mainly on technical levels are insufficient and more innovative multidisciplinary methods of dependability analysis must be applied Selection of submissions for these proceedings exemplify diversity of topics that must be included in such analyses tools methodologies and standards for modelling design and simulation of the systems security and confidentiality in information processing specific issues of heterogeneous today often wireless computer networks or management of transportation networks In addition this edition of the conference hosted the 5th CrISS DESSERT Workshop devoted to the problems of security and safety in critical information systems **Architecting Dependable Systems** ,2004 **Proceedings of the Ninth International Conference on Dependability and Complex Systems DepCoS-RELCOMEX.
