## **Depolarizing Collision In Nonlinear Electrodynamics:**

**Depolarizing Collisions in Nonlinear Electrodynamics** Igor V. Yevseyev, Valery M. Yermachenko, Vitaly V. Samartsev, 2019-07-17 In this book the authors derive the theory of elastic depolarizing collisions and describe their importance in some nonlinear electromagnetic phenomena in gaseous media The formation of photon echo and a description of its various types in gaseous media are then presented The authors show that the characteristics of the corresponding signals depend essentially on elastic depolarizing collisions They also consider the advantages of a new kind of photon echo spectroscopy polarization photon echo spectroscopy A high level specialized treatment Depolarizing Collisions in Nonlinear Electrodynamics will appeal to researchers and advanced graduates in nonlinear optics and quantum electronics

**Depolarizing Collision in Nonlinear Electrodynamics** Igor V. Yevseyev, 2002 Ultrafast Structural Dynamics of Free Molecules and Condensed Matter Anatoly A. Ischenko, Gennady V. Fetisov, Sergey A. Aseyev, 2025-12-03 It is the dream of every natural scientist to directly observe the motion of atoms and molecules in real time as they interact The natural sciences by definition involve structural dynamics and the observation of molecules interconverting from one structure to another or other structures which is after all the very essence of science Each area of the natural sciences has unique intellectual goals however they are all united by the thought experiment in which we try to understand how molecules interconvert between different structures by passing through a reaction barrier a transition state This concept of a moment an ultra short time interval in the natural sciences forces us to think about the relative positions of the atoms that define the barrier to the process of their interaction It is the control of the barrier height that allows one of many possible atomic rearrangements to occur since it occurs faster than competing processes That is the process of molecular transformation during interaction is inherently a race against time Manipulating the barrier height gives effective exponential control over the yield of the reaction product The problem of visualizing transition state structures is akin to finding a way from one valley to another in a very rugged mountainous area during an earthquake where the mountains and the landscape change as you move across the terrain suddenly a crack appears and the shaking takes you to a more stable valley Without a detailed understanding of how fluctuations in this analogy shaking affect the potential energy landscape it would be difficult to guess where and when the crack will form or the path to the next valley At its most fundamental chemistry is the study of structural dynamics discussed both for synthetic purposes and for physical methods with the explicit goal of controlling the transformation of matter from one form property to another We now have tools to observe chemical reactions at the atomic level This monograph presents a picture of the development and evolution of methods for detecting ultrafast structural dynamics processes It describes the theoretical foundations and principles of the relevant experimental techniques as well as prospects for their improvement for application in the latest existing and developing technologies The book presents the achievements of ultrafast methods of spectroscopy electron diffraction X ray diffraction and electron microscopy for

diagnostics of the structural dynamics of matter in states far from equilibrium and extreme states of matter In general the information obtained is of particular value for understanding the relationship between the elements of the structure dynamics function triad In the future this will ensure control over the functional capabilities of various materials far from equilibrium and the creation of new atomic and molecular technologies The monograph is recommended for a wide range of readers interested in the problems of the structure of matter ultrafast structural dynamics including the study of the structure and dynamics of nanomaterials scientists graduate students and students specializing in this interesting and rapidly developing area of modern natural science which is now called ultrafast science Ultrafast transmission electron microscopy uncover structure function relationships Ultra short photoelectron pulses opened up the studying of structural dynamics One electron femtosecond pulses prevents damage of biological objects Ultrafast electron microscopy uncover simultaneous real space and diffraction imaging Ultrafast diffraction and tomography holds complete information of the quantum state
