Parallel Agile - faster delivery, fewer defects, lower cost Doug Rosenberg, Barry Boehm, Matt Stephens, Charles Suscheck, Shobha Rani Dhalipathi, Bo Wang, 2020-01-03 From the beginning of software time people have wondered why it isn't possible to accelerate software projects by simply adding staff This is sometimes known as the nine women can't make a baby in one month problem The most famous treatise declaring this to be impossible is Fred Brooks 1975 book *The Mythical Man Month* in which he declares that adding more programmers to a late software project makes it later and indeed this has proven largely true over the decades Aided by a domain driven code generator that quickly creates database and API code Parallel Agile PA achieves significant schedule compression using parallelism as many developers as necessary can independently and concurrently develop the scenarios from initial prototype through production code Projects can scale by elastic staffing rather than by stretching schedules for larger development efforts Schedule compression with a large team of developers working in parallel is analogous to hardware acceleration of compute problems using parallel CPUs PA has some similarities with and differences from other Agile approaches Like most Agile methods PA gets to code early and uses feedback from executable software to drive requirements and design PA uses technical prototyping as a risk mitigation strategy to help sanity check requirements for feasibility and to evaluate different technical architectures and technologies Unlike many Agile methods PA does not support design by refactoring and it doesn't drive designs from unit tests Instead PA uses a minimalist UML based design approach Agile ICONIX that starts out with a domain model to facilitate communication across the development team and partitions the system along use case boundaries which enables parallel development Parallel Agile is fully compatible with the Incremental Commitment Spiral Model ICSM which involves concurrent effort of a systems engineering team a development team and a test team working alongside the developers The authors have been researching and refining the PA process for several years on multiple test projects that have involved over 200 developers The book's example project details the design of one of these test projects a crowdsourced traffic safety system

Artificial Intelligence in Architecture Matias del Campo, 2024-05-13 Artificial intelligence AI applications in architectural design have achieved a critical mass and exploded into the mainstream of architectural imaginations From practical applications in design and construction to the implications for architectural theory to a plethora

of novel tools for accelerated morphological studies what has become clear is that the discipline is passing a threshold that fundamentally changes architecture as a whole However the most radical change is the interrogation and novel discussion of authorship and agency in design ecologies driven by synthetic imaginations What does it mean for authorship when more than 50 per cent of the content is generated by a nonhuman player This issue seems more pressing than ever In a world that is being transformed by AI on a daily basis what is the role of the sole genius and designers artists and architects This AD dives deep into current discussions about the human position in architectural design which is increasingly entangled in an AI driven design context Contributors Cesare Battelli Phil Bernstein Mario Carpo Benjamin Ennemoser and Ingrid Mayrhofer Hufnagl Sarah Fox Wanyu He Andrew Kudless Ryan Vincent Manning Sandra Manninger Kyle Steinfeld Andrew Witt and Michael Young
