Crisis Conflict And Instability The Analysis Of Crises In The Twentieth Century:

Crises in the Twentieth Century: Crisis, conflict and instability Michael Brecher, Jonathan Wilkenfeld, Sheila Moser, 1988 **Political Leadership and Charisma** Michael Brecher, 2016-09-23 This book is unique in illuminating and comparing the charismatic role of two political leaders Jawaharlal Nehru and David Ben Gurion along with assessments of many other 20th century political leaders Its aim is to enrich our knowledge of an important dimension of global politics charismatic leadership The central role of political leaders in shaping the behavior of states has been universally recognized since the political systems of antiquity in East Asia the Middle East and Europe With the massive increase of independent states since the end of World War II from 55 initial members of the United Nations to more than 200 today and especially the emergence of awesome weapons of mass destruction the centrality of political leaders in the survival of the planet has grown exponentially Both India and Israel have experienced the crucial role of charismatic leaders Nehru and Ben Gurion who dominated their states and societies for a near identical formative period in their political independence 1947 64 and 1948 63 respectively as charismatic leaders Their impact Brecher shows extended far beyond their states to both their geographic regions and global politics *Nuclear Proliferation Dynamics in Protracted Conflict Regions* Saira Khan, 2017-11-01 This title was first published in 2003 Using extensive case studies of the nuclear weapons programmes of India Pakistan Israel Iraq Iran Egypt and Syria this important work shows that a higher than normal probability of war in protracted conflict regions prompts states to search for credible deterrents such as nuclear weapons The book rigorously examines the factors that affect the pace of this proliferation such as regional power structures and geographical proximity and challenges many prevailing theories on proliferation This compelling text convincingly argues that simple conflict relationships are not sufficient for countries to go nuclear thus providing insight into the true complexity of the issue Explaining the similarities and differences between the nuclear policies of states in protracted conflict regions the book commands the attention of anyone interested in nuclear proliferation and regional conflict International Relations and Scientific Progress Patrick James, 2002 International Relations and Scientific Progress contends that a theory focusing on the structure of the international system explains a wider and more interesting range of events in world politics than other theories Such theorizing appears to be out of favor as the result of the apparent failure by structural realism the most prominent system level theory over the last two decades on any number of fronts most notably an inability to anticipate the ending of the Cold War and its aftermath This new book is put forward as the most comprehensive and innovative theoretical work on paradigms in international relations since the publication of Theory of International Politics which created structural realism more than two decades ago With appropriate revisions however structural realist theory can compete effectively and reclaim its primacy The first part of International Relations and Scientific Progress assesses the meaning of progress in the discipline of international relations a process that culminates in the creation of a new concept the scientific research enterprise The

second part reviews structural realism within that context and identifies a lack of connection between theory and research that links power based indicators to international conflict crisis and war This part of the book makes the case for an elaboration of structural realism by showing that a system level theory based on structure has great unrealized explanatory potential By comparison the current overwhelmingly research oriented agenda on state dyads imposes severe limitations on understanding that are not currently appreciated Part Three sums up the work and explores new directions most notably as related to empirical testing of an elaborated version of structural realism that focuses on both continuity and change in the international system

Social Science Concepts Gary Goertz, 2006 To develop theories and research designs requires concepts Gary Goertz provides advice on the construction and use of social science concepts and their use in case selection and theories He also cites examples from political science and sociology to illustrate the theoretical and practical issues of concept construction and use

What Do We Know about War? John A. Vasquez, 2000 What Do We Know about War reviews the causes of war and the conditions of peace Drawing analyses from the thirty five year history of this discipline leading researchers explore the roles played by alliances territory arms races interstate rivalries capability and crisis bargaining in increasing the probability of war They emphasize international norms and the recent finding that democratic states do not fight each other as factors that promote peace This book offers an accessible and up to date overview of current knowledge and an agenda for future research

Continuity and Change in World Politics Barry B. Hughes, 1991 An introduction to world politics this text explains eight major forces of global transformation focusing on the dynamics of change It covers issues of political economy and global public policy and

analyzes the collapse of communism in Central Europe and the changes in East West relations **Crisis, Conflict, and Instability** Michael Brecher, Jonathan Wilkenfeld, Patrick James, 1989-01-01 *Biographical Membership Directory* International Studies Association, 1992 *Books in Print Supplement* , 1994 *Human Rights Praxis and the Struggle for Survival* William T. Armaline, Davita Silfen Glasberg, 2024-09-30 Asserting a critical sociological perspective Human Rights Praxis and the Struggle for Survival reveals the contested historical processes through which fundamental human needs are constructed as rights under international law and how those rights are confronted by the ruling relations and crises inherent to contemporary global capitalism and the waning American hegemonic world order Put simply the book explores why human rights as a formal legal project has failed to deliver on guaranteeing human survival let alone universal human dignity Rather than stopping at critique the authors propose a specific materialist intellectual and political agenda for the preservation of collective human survival that can achieve the historically unique notions of common humanity and human emancipation The authors build on previous work further developing the sociology of human rights as a distinct field at the intersection of Social Sciences and International Law They take on several provocative theoretical debates such as those over connections between racism and capitalism the existence of a global or transnational police state the control growth and exploitation of migrants migration and the complex relationship between political repression and various forms of domination Human Rights Praxis and the Struggle for Survival offers critical analysis of contemporary politics and options for students scholars organizers and stakeholders to grapple with some of the most pressing social problems of human history
