Bringing Skepticism to Crop Science Thomas Sinclair, Thomas W. Rufty, 2023-01-01 Global food production and climate change among other concerns are societal issues that require major research input from crop science While suggestions are abundant on how crop science can help to resolve these issues many of the suggestions come from people who are not actually familiar with the challenges and requirements to modify crop plants grown under field conditions to achieve the necessary improvements Efforts to alter a gene or even several genes have very rarely proven successful in having impact on crop production under realistic field conditions This lack of success has not been addressed head on This book serves as a reminder to crop scientists and others that open clear minded assessments of the entirety of evidence concerning a hypothesis is required before making claims of possible increases in crop performance This attitude of skepticism is not a negative attitude but rather an employment of the cornerstone of scientific investigation based on formation and evaluation of hypotheses Skeptical analyses are to be presented in the book on some of the common suggestions for improving crop plants The six specific topics to be addressed are photosynthesis seed number nitrogen use efficiency water use efficiency crop water loss and unconfirmed field observations Each of the topics in this book will first be reviewed to present the origins of the popular assumptions about how specific plant modification will result in improved crop performance The review of the background information will be followed by an examination of the evidence logic and predicted outcomes for the assumed benefits of the modifications Finally each chapter will offer novel alternate approaches to plant modification that have documented support for positively impacting crop performance The book will not be written in specialized detail language but offer access for those with a wide range of interests in options for increasing crop production in the future The goal of the book is to provide information that is useful to those with interests ranging from climatologist to food oriented sociologists Of course the topics covered will be of direct interest to those studying plant sciences particularly crop scientists The hope is to challenge a reader to re examine some of her his assumptions about crop improvement and approach the topic with a renewed practice of skepticism in formulating and evaluating hypotheses *Crop Science and*

1984 In the Institute accident debris from the blast hit the shield surrounding a MIC storage tank and although the container was not damaged an investigation by the U S Chemical Safety and Hazard Investigation Board found that the debris could have struck a relief valve vent pipe and cause the release of MIC to the atmosphere The Board s investigation also highlighted a number of weaknesses in the Bayer facility s emergency response systems In light of these concerns the Board requested the National Research Council convene a committee of independent experts to write a report that examines the use and storage of MIC at the Bayer facility The Use and Storage of Methyl Isocyanate MIC at Bayer CropScience also evaluates the analyses on alternative production methods for MIC and carbamate pesticides performed by Bayer and the previous owners of the facility
