Crossing The Border The Social And Engineering Design Of Computer Integrated Manufacturing Systems:

Crossing the Border J. Martin Corbett, Lauge Baungaard Rasmussen, Felix Rauner, 2012-12-06 Crossing the Border examines the emergence of a new philosophy based on the idea of human centred technology and through the use of a case study illustrates the ways in which users social scientists managers and engineers can participate in the design and development of human centred computer integrated manufacturing CIM system The book offers a unique insight into a large European project ESPRIT project 1217 aimed at the design and development of a human centred CIM system The book examines the problems inherent in developing interdisciplinary design methods and of crossing the border between the social and engineering sciences The authors offer proposals and guidelines for overcoming such problems based on their experience within this project Crossing the Border will be of particular interest to researchers and practitioners in the area of factory automation to students and researchers in AI and to all those interested in the human and organisational issues surrounding the computerised factory of the future The Symbiosis Of Work And Technology J. Benders, J. de Haan, Dusan Toedorovic, 1995-07-11 Since the 1950s individual researchers and research groups in many countries Have Developed So Called Symbiotic Design Methods And Approaches Which have tried to integrate technical organisational and social goals in order to create economically viable production systems If implemented Successfully Symbiotic Systems Offer Enhanced Worker And System performance competitive leverage and employee benefits Based on contributions from international authors this text provides state of the art research which is intended to help realise the aims of this innovative initiative

Organization and Management of Advanced Manufacturing Waldemar Karwowski, Gavriel Salvendy, 1994-03-31 Takes into account the effective use of human factors issues in advanced manufacturing which would make the difference between the failure or success of industrial corporations International authorities describe how to implement methods and techniques applicable on a global basis into manufacturing and process industries where change is being brought about as they move to concurrent engineering formats of operation *Human Performance in Planning and Scheduling* B L MacCarthy, John R. Wilson, 2003-09-02 Understanding how to make the best of human skills and knowledge is essential in the design of technology and jobs particularly where these involve decision making and uncertainty Recent developments have been made in naturalistic decision making distributed cognition and situational awareness particularly with respect to aviation transport and strategic planning the nuclear industry and other high risk industries Despite the integration of computer based support systems in production scheduling in recent years the reality is that most enterprises consist of reactive re scheduling involving a high degree of human involvement It is often with the insight knowledge and skills of people that scheduling skills can function with any degree of success Human Performance in Planning and Scheduling covers many industries including clothing steel machine tools paper board and the automobile industry Using international case studies from various manufacturing industries they highlight the fact that the human scheduler is a pivotal element in the scheduling process

Each section of the book includes an introduction with an overview of the material to follow clearly identifying themes discussion points and highlights inter connections between the authors work

New Wave Manufacturing Strategies John Storey, 1994-02-28 Over the past decade many companies have adopted new strategies for manufacturing which have taken their competitiveness on to new planes A whole array of initiatives such as FMS JIT TQM CIM and MRP II have been introduced This book deals with the far reaching significance of these new approaches collectively labelled new wave manufacturing Considerable research evidence as well as practitioners own experiences make one crucial point time and time again The organizational as well as the human resource management aspects of these new strategies are critical to their success or failure The underlying theme which is tackled in this book therefore is to what extent do these new operational strategies require a matching set of organizational and HR strategies By looking at the issues through the joint eyes of production and behavioural analysts this book provides an unique introduction to the new developments in manufacturing as well as providing an up to date assessment of the organizational and H R dimensions to these methods New Wave Manufacturing Strategies has a vision which goes beyond the new technology advanced manufacturing technology discussions The chapters have been written in a clear accessible manner by leading experts from Europe the USA and Australia as well as from the UK

Ergonomics of Hybrid Automated Systems II Waldemar Karwowski, Mansour Rahimi, 1990 Advanced manufacturing systems from their conception to implementation require intense human involvement In the attempt to eliminate human labour other skills become vital in the successful design and operation of high technology systems In order to succeed technical knowledge must be integrated with human capabilities within a social infrastructure from top level management to end users Such integration can be best organized into a socio technical theoretical framework The papers in this volume reflect the complexity of current and potential problems which are intrinsic to technological advances in computerized manufacturing systems

The Occupational Ergonomics Handbook Waldemar Karwowski, William S. Marras, 1998-12-18 Occupational ergonomics and safety studies the application of human behavior abilities limitations and other characteristics to the design testing and evaluation of tools machines systems tasks jobs and environments for productive safe comfortable and effective use Occupational Ergonomics Handbook provides current comprehensive knowledge in this broad field providing essential state of the art information from nearly 150 international leaders of this discipline The text assesses the knowledge and expertise applied to industrial environments Providing engineering guidelines for redesigning tools machines and work layouts Evaluating the demands placed on workers by current jobs Simulating alternative work methods Determining the potential for reducing physical job demands based on the implementation of new methods Topics also include Fundamental ergonomic design principles at work Work related musculoskeletal injuries such as cumulative trauma to the upper extremity CTDs and low back disorders LBDs which affect several million workers each year with total costs exceeding 100 billion annually Current knowledge used for minimizing

human suffering potential for occupational disability and related worker's compensation costs Working conditions under which musculoskeletal injuries might occur Engineering design measures for eliminating or reducing known job risk factors Optimal manufacturing processes regarding human perceptual and cognitive abilities as well as task reliability Identifying the worker population affected by adverse conditions Early medical and work intervention efforts Economics of an ergonomics maintenance program Ergonomics as an essential cost to doing business Ergonomics intervention includes design for manufacturability total quality management and work organization Occupational Ergonomics Handbook demonstrates how ergonomics serves as a vital component for the activities of the company and enables an advantageous cooperation between management and labor This new handbook serves a broad segment of industrial practitioners including industrial and manufacturing engineers managers plant supervisors and ergonomics professionals researchers and students from academia business and government human factors and safety specialists physical therapists cognitive and work psychologists sociologists and human computer communications specialists

Qualification for Computer-Integrated Manufacturing Felix Rauner, 1995-08-11 The introduction of Computer Integrated Manufacturing plays a vital role in ensuring economic competitiveness The implementation of CIM has long been considered to be problematic As a consequence of this discussions as to the suitability of a particular organisation or process for CIM have focused almost exclusively on the technical issues However it has now become clear that CIM affects almost all aspects of an enterprise and considerations of qualification for CIM should not therefore be limited merely to technical aspects Its introduction is as much a matter of the organisation of work and of organisation development High quality flexible manufacturing processes can be achieved only by maintaining a balance between the implementation of new technology the organisation of work and vocational education The qualification of employees and their willingness in the introduction of CIM is an essential key to success

International Perspectives on Information Systems Savvas Katsikides, Graham Orange, 2018-10-26 First published in 1998 this book addresses the increasingly important social and organisational issues of information systems development both at the operational level and within a wider social context Reflecting the environmental issues surrounding the development of information systems and the implementation of information technology This book is aimed at supporting information systems courses incorporating a behavioural element or sociology courses with an information systems content
