experience chatbot design and applications *Artificial Women* Julie Wosk, 2024-04-02 Enhanced by artificial intelligence today's simulated females are becoming ever more lifelike as the virtual vies with the real. They have already had a dramatic impact on personal relationships on our views of women and our ideas about what it means to be human. From sex dolls to Siri talking Barbies to robotic mothers, *Artificial Women* explores the ways in which today's simulated females both real and fictional reflect and expose our own ideas about sexuality, gender, and the impact of simulations on social relationships. Join Julie Wosk as she probes the realm of compliant robot sex workers, nurturing genial caregivers and companions, virtual assistants like Siri and Alexa, and rebellious creations in film, television, literature, art, photography, and current developments in robotics. These simulated women often reflect old stereotypes but also highlight a new breed of female robots, cyborgs, and dolls that possess agency, self-awareness, and autonomy. *Artificial Women* pushes the boundaries of culture studies to consider how new digital technologies, artificial intelligences, and burgeoning simulations affect our own understandings of ourselves.

Collective Intelligence in Open Policymaking Rafał Olszowski, 2024-05-29 This book examines the nexus of collective intelligence (CI), a feature of online projects in which various types of communities solve problems intelligently, and open policymaking as a trend of large groups of people shaping public policies. While doing so, it presents the current state of theoretical knowledge for these concepts, many practical examples of successful and unsuccessful projects, as well as additional research and laboratory experiments. The book develops an analytical framework based on qualitative research which is applied to the analysis of different projects in selected case studies such as Decide Madrid, Better Reykjavik, Loomio, Deliberatorium, Civic Budget of the City of Kraków. The book is structured into four chapters addressing essential questions in the field: 1. Opening Policymaking, 2. Beyond the Individual: Understanding the Evolution of Collective Intelligence, 3. A Review of the Projects Using Collective Intelligence in Policymaking, 4. Online Public Debate: How Can We Make it More Intelligent. The book will appeal to students, scholars, and researchers of political science, public policy, and public administration, as well as policymakers interested in a better understanding of collective intelligence and open policymaking. **The De Gruyter**

Handbook of Automated Futures Vaike Fors, Martin Berg, Meike Brodersen, 2024-09-23 How does automation affect us, our environment, and our imaginations? What actions should we take in response to automation? Beyond grand narratives and technology-driven visions of the future, what more can automation offer? With these questions in mind, *The De Gruyter Handbook of Automated Futures* provides a framework for thinking about and implementing automation differently. It consolidates automated futures as an inter- and transdisciplinary research field, embedding the imaginaries, interactions, and impacts of automation technology within their social, historical, societal, cultural, and political contexts. Promoting a critical yet constructive and engaging agenda, the handbook invites readers to collaborate with rather than resist automation agendas. It does so by pushing the agenda for social science, humanities, and design beyond merely assessing and evaluating existing technologies. Instead, the handbook demonstrates how the humanities and social sciences are essential to the design and

governance of sustainable sociotechnical systems Methodologically the handbook is underpinned by a pedagogical approach to staging co learning and co creation of automated futures with rather than simply for people In this way the handbook encourages readers to explore new and alternative modes of research fostering a deeper engagement with the evolving landscape of automation Intelligent Virtual Agents ,2003 **Teaching with the Internet** Beverley E.
