Digital Literacies Mark Pegrum, Nicky Hockly, Gavin Dudeney, 2022-05-11 Dramatic shifts in our communication landscape have made it crucial for language teaching to go beyond print literacy and encompass the digital literacies which are increasingly central to learners' personal, social, educational and professional lives. By situating these digital literacies within a clear theoretical framework, this book provides educators and students alike with not just the background for a deeper understanding of these key 21st century skills but also the rationale for integrating these skills into classroom practice. This is the first methodology book to address not just why but also how to teach digital literacies in the English language classroom. This book provides a theoretical framework through which to categorise and prioritise digital literacies. Practical classroom activities to help learners and teachers develop digital literacies in tandem with key language skills. A thorough analysis of the pedagogical implications of developing digital literacies in teaching practice. A consideration of exactly how to integrate digital literacies into the English language syllabus. Suggestions for teachers on how to continue their own professional development through PLNs (Personal Learning Networks) and how to access teacher development opportunities online. This book is ideal for English language teachers, English language learners of all ages and levels, academics and researchers of all age groups and levels, academics and students researching digital literacies and anyone looking to expand their understanding of digital literacies within a teaching framework. *Implementation mapping for selecting, adapting and developing implementation strategies* Maria E. Fernandez, Byron J. Powell, Gill Ten Hoor, 2023-11-07

Artificial Intelligence in Education Vania Dimitrova, 2009 This publication covers papers presented at AIED2009, part of an ongoing series of biennial international conferences for top quality research in intelligent systems and cognitive science for educational computing applications. The conference provides opportunities for the cross-fertilization of techniques from many fields that make up this interdisciplinary research area, including artificial intelligence, computer science, cognitive and learning sciences, education, educational technology, psychology, philosophy, sociology, anthropology, linguistics and the many domain-specific areas for which AIED systems have been designed and evaluated. AIED2009 focuses on the theme 'Building learning systems that care', from knowledge representation to affective modelling. The key research question is how to tackle the complex issues related to building learning systems that care, ranging from representing knowledge and context to modelling social, cognitive, metacognitive and affective dimensions. This requires multidisciplinary research that links theory and technology from artificial intelligence, cognitive science and computer science with theory and practice from education and the social sciences.
