Discourse In Late Modernity Rethinking Critical Discourse Analysis:

Discourse in Late Modernity Lilie Chouliaraki, Norman Fairclough, 1999 Discourse in Late Modernity sets out to show that critical discourse analysis is strongly positioned to address empirical research and theory building across the social sciences particularly research and theory on the semiotic linguistic aspects of the social world It situates critical discourse analysis as a form of critical social research in relation to diverse theories from the philosophy of science to social theory and from political science to sociology and linguistics First the authors clarify the ontological and epistemological assumptions of critical discourse analysis its view of what the social world consists of and how to study it and in so doing point to the connections between critical discourse analysis and critical social scientific research more generally Secondly they relate critical discourse analysis to social theory by creating a research agenda in contemporary social life on the basis of narratives of late modernity particularly those of Giddens Habermas and Harvey as well as feminist and postmodernist approaches Thirdly they show the relevance of sociological work in the analysis of discursive aspects of social life drawing on the work of Bourdieu and Bernstein to theorise the dialectic of social reproduction and change and on post structuralist post colonial and feminist work to theorise the dialectic of complexity and homogenisation in contemporary societies Finally they discuss the relationship between systemic functional linguistics and critical discourse analysis showing how the analytical strength of each can benefit from the other Sets out a new and distinctive theoretical grounding and research agenda for critical discourse analysis Interdisciplinary in scope Draws on a broad range of theories and approaches

Framing the Threat Imke Köhler, 2019-03-04 There is great power in the use of words words create most of what we consider to be real and true Framing our words and narratives is thus a tool of power but a power that also comes with limitations This intriguing issue is the topic of *Framing the Threat* an investigation of the relationship between language and security and of how discourse creates the scope of possibility for political action In particular the book scrutinizes and compares the security narratives of the former US presidents George W Bush and Barack Obama It shows how their framings of identity i e of the American self and the enemy other facilitated a certain construction of threat that shaped the presidents detention and interrogation policies By defining what was necessary in the name of national security Bush's narrative justified the operation of the detention center at Guantanamo Bay and rendered the mistreatment of detainees possible a situation that would have otherwise been illegal Bush's framings therefore enabled legal limits to be pushed and made the violation of rules appear legitimate Obama in contrast constructed a threat scenario that required an end to rule violations and the closure of Guantanamo for security reasons According to this narrative a return to the rule of law was imperative if the American people were to be kept safe However Obama's framing was continually challenged and it was never able to dominate public discourse Consequently *Framing the Threat* argues Obama was unable to implement the policy changes he had announced

International Handbook of Interpretation in Educational Research Paul Smeyers, David Bridges, Nicholas C. Burbules, Morwenna Griffiths, 2015-01-06 This handbook focuses on the often neglected dimension of interpretation in educational research. It argues that all educational research is in some sense interpretive and that understanding this issue belies some usual dualisms of thought and practice such as the sharp dichotomy between qualitative and quantitative research. Interpretation extends from the very framing of the research task through the sources which constitute the data, the process of their recording, representation and analysis to the way in which the research is finally or provisionally presented. The thesis of the handbook is that interpretation cuts across the fields both philosophically, organizationally and methodologically. By covering a comprehensive range of research approaches and methodologies, the handbook gives early career researchers what they need to know in order to decide what particular methods can offer for various educational research contexts/fields. An extensive overview includes concrete examples of different kinds of research, not limited for example to teaching and learning examples as present in the Anglo-Saxon tradition but including as well what in the German Continental tradition is labelled *pädagogisch*, examples from child rearing and other contexts of non-formal education with full description and explanation of why these were chosen in particular circumstances and reflection on the wisdom or otherwise of the choice combined in each case with consideration of the role of interpretation in the process. The handbook includes examples of a large number of methods traditionally classified as qualitative, interpretive and quantitative used across the area of the study of education. Examples are drawn from across the globe thus exemplifying the different opportunities and constraints that educational research has to confront in different societies
