Afzaal, Swaleha Bano Naqvi, Geng Qiang, 2023-11-27 As culture and society has become more digitalized especially when computer science and digital technologies have entered a new era in the twenty first century translation studies began to utilize a wide range of tools to enhance its reading of texts and contexts without which translation both as a practice and as a theorization could barely persist It has become more apparent that two extreme poles between macro and micro visions have formed the diversified terrains of translation studies On the one hand technologies like NLP topic modeling network analysis and data visualization make distant reading become possible thus allowing us to have a paradigmatic view of how human s ideas beliefs values knowledge and even emotions have spread in some patterns across cultural geographical and language divides in world history On the other hand corpus methods such as the use of keywords collocates and concordance lines changed the way by which texts were closely read from linear to vertical With microscope like corpus tools we could go deeper into the texture for perception of nuanced meaning While considering a fact that translation is seldom mono modal in conveying meaning we have to reconceptualize context as a multimodal environment where audio visual and other resources

interact to convey and make meaning With regard to the fast development of digital technology translation studies take an active role in gaining an enhanced capability in promoting transformation Complexity has been favored in terms of theoretical framework and methodology New questions are asked old ones revisited with novel tools but more areas wait to be cultivated and more questions to be approached by combining quantitative and qualitative methods We could ask if digital technologies would bring new innovation to study of translation history a heavily walled land for traditional humanists who tend to repeat so what to question the less significance of data driven studies The idea of high quality machine translation has become so realistic in today s market that translation educators have to face the shock wave it brought to translation learners and practitioners and rethink the relation between human translators and algorithms Machine translation assisted communication could help remove boundaries for better communication but at the same time it also creates conflicts and leads to confrontation Thus understood it is imperative to give a concerned attention to digital translation studies that is to study translation by resorting to and drawing on the digital technologies This Research Topic is intended to promote current directions and new developments in cross disciplinary critical discourse research We welcome papers which from a critical analytical perspective deal with contemporary social scientific political economic or professional discourses and genres Papers addressing the highlighted topics are especially welcome In giving weight to these topics we wish to call to attention some of the most pressing problems currently facing the world

Discourse Markers in Early Modern English Ursula Lutzky,2012 This volume provides new insights into the nature of the Early Modern English discourse markers marry well and why through the analysis of three corpora A Corpus of English Dialogues 1560 1760 the Parsed Corpus of Early English Correspondence and the Penn Helsinki Parsed Corpus of Early Modern English By combining both quantitative and qualitative approaches in the study of pragmatic markers innovative findings are reached about their distribution throughout the period 1500 1760 their attestation in different speech related text types as well as similarities and differences in their functions Additionally this work engages in a sociopragmatic study based on the sociopragmatically annotated Drama Corpus of almost a quarter of a million words to enhance our understanding about their use by characters of different social status and gender This volume therefore constitutes an essential piece of the puzzle in our attempt to gain a full picture of discourse marker use

Discourse Markers Andreas H. Jucker, Yael Ziv, 1998-07-15 Studies of Discourse Markers so far have concentrated on either the descriptive or the theoretical parameter This book brings together thirteen papers concerning aspects of lexical instantiations of Discourse Marking devices ranging from functional descriptions along cognitive attitudinal interactive and structure signalling lines to theoretical issues arising from various properties discourse markers display cross linguistically Data from English Finnish Hebrew Korean and Japanese are examined Also addressed are questions concerning overall accounts potential sub classifications possible form function correlations and the appropriateness of such frameworks as Relevance Theory for their description Interestingly features evident in the distribution and use of lexical discourse markers are shown to affect the assessment of such theoretical constructs as the distinction between conceptual and procedural meaning A more sophisticated picture emerges than a simple dichotomy between the two Studies of the grammar of Discourse Markers hence would have to take the observations and suggestions raised in this collection of papers into account
