more than ever the question is Time an ontological property a necessary ingredient for the physical description of the world

or a purely epistemological element relative to our situation in the world worry physicists and cosmologists alike For many of

them Relativity and particularly General Relativity as well as its reconciliation with quantum mechanics in the elaboration of

a quantum theory of gravitation points to a negative answer to the first alternative and leads them to deny the objective

reality of time For others the answer is nuanced by the evidence of an emerging temporal property when one climbs the

scales of the complexity of systems and or the applicability of the statistical laws of thermodynamics But for some the illusion

of the unreality of time comes from certain confusions that they denounce and plead for the re establishment of time at the

heart of physical theories Discover! Physical Science Kit Cindy Barden, 2000-09 *Physical Science* Kozman, Nabil, 1991
