Discrete Event Physics:

Discrete Event Physics William Delaney, 2012-03 *Discrete Event Physics* introduces a new branch of Physics concerned with elucidating the meaning of concepts traditionally studied in that discipline. It is complementary to Mathematical and Experimental Physics being focused on the same ideas but having different specific goals. The theory has a fundamentally dynamic nature based on structured discrete events. Events are defined and interrelated using a formal language developed for such purposes. This volume extends the theory and discusses applications that clarify its utility in overcoming imperfections in traditional approaches to the treatment of Physics problems: the general inadequacy of the operational paradigm for property definition; the long standing problem of probability definition confusion arising from indiscriminate use of the term wave; the definition of meaning; knowledge and understanding in science; the definitions of energy and entropy; the solution of the paradox of Einstein, Podolski and Rosen; the solution of non locality problems in double slit interference experiments. Computational Science - ICCS 2006 Vassil N. Alexandrov, 2006 Annotation: The four volume set LNCS 3991-3994 constitutes the refereed proceedings of the 6th International Conference on Computational Science ICCS 2006 held in Reading, UK, in May 2006. The main conference and its 32 topical workshops attracted over 1400 submissions. The 98 revised full papers and 29 revised poster papers of the main track presented together with 500 accepted workshop papers were carefully reviewed and selected for inclusion in the four volumes. The papers span the whole range of computational science with focus on the following major themes: tackling grand challenges; problems modelling and simulations of complex systems; scalable algorithms and tools; and environments for computational science. Of particular interest were the following major recent developments: novel methods and modelling of complex systems for diverse areas of science; scalable scientific algorithms; advanced software tools; computational grids; advanced numerical methods; and novel application areas where the above novel models, algorithms and tools can be efficiently applied, such as physical systems, computational and systems biology, environmental systems, finance and others. **Towards a Local Realist View of the Quantum Phenomenon**

Data governance in African health research: ELSI challenges and solutions Donrich Thaldar, Simisola Oluwatoyin Akintola, Bonginkosi Shoji, 2025-04-02 Data protection legislation is increasingly being enacted in African countries. Additionally, the African Union recently adopted the AU Data Protection Framework. How are these legal and policy developments influencing established ethics notions about data governance in health research? For example, is broad or tiered consent to research participation sufficient, or does new legislation require specific consent? How do individual rights in data interact with communitarian values? Should health research receive special treatment from a data protection regulatory perspective? How should African countries approach AI in healthcare? This research topic aims to identify and analyse ELSI challenges in contemporary data governance in African health research and to develop possible solutions for such challenges. Articles in this research topic will aim to assist policy makers, health researchers, and ELSI practitioners in Africa to better navigate and, where relevant, improve data governance in African health research. Perspective style articles as well as more in-depth research articles are welcome. While articles can analyse fundamental theoretical issues, application-oriented articles and articles that explore lessons learnt in practice are especially encouraged. Authors should address one or more of the following inter-related themes within the research topic of data governance in African health research:

1. Conflicts between new legal and policy developments and established ethics notions
2. Africanisation, decolonisation, and intra-African rule harmonisation
3. The evolution of informed consent and the role of trust
4. The various legal, ethical, and social dimensions or meanings of data and how these dimensions interact
5. Power and control. This includes individual, institutional, ethnic, community, and national claims to data. It also includes existing and proposed structures of control of data, such as data trusts and data transfer agreements (DTAs).
6. Engagement with data protection regulatory authorities
7. Artificial intelligence and Big Data

Discrete-event Modeling and Simulation Gabriel A. Wainer, 2009 Offers a guidance to the creation of discrete event applications. This book uses the CD tool, an open source framework that enables the simulation of discrete event models with specialized support for cellular models. It demonstrates how to use CD to develop simulation models and define a variety of uses in different areas.
