Artificial Intelligence Applications in Higher Education Helen Crompton, Diane Burke, 2024-10-31 Artificial Intelligence Applications in Higher Education offers direct examples of how artificial intelligence systems can be applied in today's higher education contexts. As the use of AI rapidly advances within colleges and universities worldwide, there is a pressing need to showcase the challenges, opportunities, and ethical considerations that are inherent in deploying these advanced computational tools. This book highlights the multifaceted roles of AI across teaching and learning, institutional administration, student data management, and beyond. Its collected case studies furnish actionable insights into enhancing academic institutions and addressing diverse learning priorities such as motivation, engagement, feedback, and achievement goals. This valuable reference for researchers, designers, administrators, teaching faculty, and graduate students across various university programs offers fresh perspectives on generative AI, adaptive learning, intelligent tutoring systems, chatbots, predictive technologies, remote learning, and more.

Theory and Practice in Vocabulary Research in Digital Environments Mark Feng Teng, Agnes Kukulska-Hulme, Junjie Gavin Wu, 2024-12-27 This collection is a comprehensive resource on the state of second language vocabulary learning today, building on earlier studies to spotlight the diversity of issues and foci in the field toward encouraging further advancements in both research and practice. The volume foregrounds the importance of vocabulary learning in language teaching and learning and in effective written and verbal communication, charting the range of approaches and theories used to address the unique challenges of vocabulary instruction. While there exists a well-established body of vocabulary research, this book takes those lines of inquiry in new directions by exploring how technology has shifted the focus from teacher-led delivery to more activity-driven experiences. Chapters from prominent researchers and rising scholars feature studies on emergent approaches in virtual environments such as interactive whiteboards, CMC, virtual world learning, and mobile-assisted language learning. In offering a holistic portrait of technology-enhanced vocabulary learning, the volume makes the case for the power of technological tools in fostering optimal environments for encouraging vocabulary acquisition and, in turn, the potential opportunities for future research and pedagogical applications. This book will be of interest to students and scholars in second language acquisition, language education, TESOL, and applied linguistics.
