Critical Analysis Of Monoclonal Therapy In Transplantation:

Critical Analysis of Monoclonal Antibody Therapy in Transplantation William J. Burlingham, 1991-12-18 *Critical Analysis of Monoclonal Antibody Therapy in Transplantation* provides a critical analysis of monoclonal antibody therapies in transplantation. The book presents diverse approaches to monoclonal antibody therapy in transplantation and addresses some of the serious obstacles that remain both in understanding these mechanisms and in successfully applying them in clinical situations. The background and rationale for OKT3 therapy are examined and an extensive clinical experience with OKT3 induction therapy in cardiac transplantation is reviewed. The book also examines the background and rationale for the use of anti TcR anti IL 2R and anti LFA 1 monoclonal antibodies in clinical transplantations. Other topics include the use of monoclonal antibodies to CD4 and CD8 for the induction of adult transplantation tolerance in rodents and the possibilities for applying anti idiotypal strategies that have proven useful in autoimmunity models to transplant recipients. Researchers and basic scientists involved in this field will find the book a fascinating and useful resource for their investigations. **Lessons**

from Animal Diabetes VI Eleazar Shafrir, 2012-12-06 *Genic constructs* Five articles are devoted to this topic ranging from the B cell function in transgenic animals to the various effects on diabetes complications. The section on NIDDM comprising of 10 articles deals both with new and existing models their particular widely varying pathogenesis genetic characteristics and complications. The animals reviewed include spontaneously diabetic OLETF rats Chinese hamsters Goto Kakizaki rats db/db mice rhesus monkeys dogs and an article demonstrating the genetic link between the Zucker fa/fa and corpulent cp/cp obese interstrains. We wish to welcome the new members to our Editorial Board Dr Hubert Kolb from Dusseldorf Dr Alex Rabinovitch from Edmonton Dr Takayoshi Toyota from Sendai and Dr Soroku Yagihashi from Hiroshima. At the same time we would like to thank Dr Douglas L Coleman from Bar Harbor and Dr George Eisenbarth from Denver for their editorial contribution to the previous LAD Volumes who have retired from the Editorial Board. With great sadness we have to mention Dr Otho Michaelis IV from Beltsville MD who suddenly passed away this year. Otho or Mike as he was called by friends made a significant contribution in developing and metabolically defining several strains of corpulent cp rats and was extremely helpful in the editorial work of the LAD series. His contribution will remain in a lasting memory of all researchers of animal diabetes.

Cumulated Index Medicus, 1992 **National Library of Medicine Current Catalog** National Library of Medicine (U.S.), 1993 Clinical and Experimental Rheumatology, 1992 The Impact of Biotechnology on Autoimmunity

A.G. Dalgleish, A. Albertini, Rodolfo Paoletti, 1994-02-28 The term autoimmunity has been used to categorize a number of different diseases of unknown etiology. The term as applied to many of these diseases would probably be interpreted best as autoreactivity as the clinical phenotypes are often characterized by an inflammatory like accumulation of activated cells of the immune system at sites of obvious damage of normal cells and/or tissue. The reasons as to why an immune system should attack itself are far from clear although the association with specific infectious diseases in genetically susceptible people

remains perhaps our best lead The input of the biotechnological revolution has enabled us to attempt to readdress many of the fundamental questions raised by clinical and serological associations with autoimmune disease The ability to dissect the immune response to these infectious agents which are associated with autoimmune features as well as the facility to identify new agents e g HIV in addition to the ability to clone and sequence immune response genes has enabled a much better understanding at least of the complexity of autoimmunity to be gleaned This volume contains the chapters that summarize the plenary presentations given at The Impact of Biotechnology on AUTOIMMUNITY meeting in Florence Italy in June 1993 They cover all aspects from pathogenesis to treatment The association with infectious diseases and autoimmunity is comprehensively covered by David Isenberg who reviews major issues such as the association of autoantibodies appearing after infectious disease and antibacterial antibodies associated with autoimmune disease
