*Psychiatry II* Kenneth S. Kendler,Josef Parnas,2012-04-19 Psychiatric and psychological practice and research is critically dependent on diagnosis Yet the nature of psychiatric diagnosis and the rules by which disorders should be created and organized have been highly controversial for over 100 years Unlike simple medical disorders like infectious diseases psychiatric disorders cannot be traced to one simple etiologic agent The last two generations have seen major conceptual shifts in the approach to diagnosis with the rise of operationalized criteria and an emphasis on a descriptive rather than etiological approach to diagnosis The interest in psychiatric diagnoses is particularly heightened now because both of the major psychiatric classifications in the world DSM and ICD are now undergoing major revisions What makes psychiatric nosology so interesting is that it sits at the intersection of philosophy empirical psychiatric psychological research measurement theory historical tradition and policy This makes the field fertile for a conceptual analysis This book brings together established experts in the wide range of disciplines that have an interest in psychiatric nosology The contributors include philosophers psychologists psychiatrists historians and representatives of the efforts of DSM III DSM IV and DSM V Some of the questions addressed include i what is the nature of psychiatric illness Can it be clearly defined and if so how ii What is the impact of facts versus values in psychiatric classification iii How have concepts of psychiatric diagnosis changed over time iv How can we best conceptualize the central idea of diagnostic validity And v Can psychiatric classification be a cumulative enterprise seeking improvements at each iteration of the diagnostic manual Each individual chapter is introduced by the editors and is followed by a commentary resulting in a dynamic discussion about the nature of psychiatric disorders This book will be valuable for psychiatrists psychologists and other mental health trainees and professionals with an interest in the questions and problems of psychiatric diagnosis as well as philosophers and philosophy students interested in the problems posed by psychiatry particularly those working in the philosophy of science *Diagnosis and the DSM S.*
